MARKETING FLORIDA CITRUS
SUMMARY OF 1960-61 SEASON

by
H. F. Willson

Lakeland, Florida

September 28, 1961

M 13 22

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Foreign Agricultural Service; the Citrus Inspection Division, Florida Department of Agriculture; the Federal-State Frost Warning Service; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Cannery Ass'n; the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida; and the State Plant Board of Florida.

Shipments, unloads and other similar data for the 1960-61 season are subject to revision on account of late and corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1960-61 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 13, 1960 to June 16, 1961, inclusive.

GENERAL COMMENTS

Florida oranges, grapefruit and tangerines - for the 1960-61 season - each had a story all its own. For oranges, it was a year with the highest returns on record, despite the fact final production figures were the 6th lowest in the past 10 years and fresh shipments hit an all-time low, or since the 1920's. However, the high prices - recordwise - both in fresh and processed channels - more than offset the difference of the low production, and the frozen orange volume hit an all-time high. It was a different situation for Florida grapefruit. Unofficial pre-season estimates were very high, but hurricane Donna came along to reduce the crop to the 3rd lowest figure in the last 10 years. Overnight, predictions took an abrupt change for a better outlook but, as the season progressed, grapefruit became the problem child again. Even under these conditions, there were more cars of fresh grapefruit shipped from the State than oranges, for the 2nd time in the history of the industry. Auction prices - largely Indian River fruit - were in the bracket with 4 of the past 6 seasons - and the processed delivered cannery prices for sectionizing grapefruit approached a year ago, but returns for juice stock were down approximately 16¢ a box. The production of Texas grapefruit also increased again considerably, with the resultant keener competition for Florida fruit. The State's tangerine crop almost equalled the all-time record high compared to the peak season of 1954-55. The season was late and there was a relatively high percentage of small sizes. Total fresh tangerine shipments were considerably above a year ago, with the auction averages higher than 5 of the past 10 years. Worthy of mention was the job of merchandising accomplished, particularly on small sizes following the Christmas holidays. In transportation, the "piggy-back" volume increased sharply - with the two originating rail lines in the State inaugurating special weekly schedules of solid "piggy-back" trainloads. Also, new citrus legislation was passed in the 1961 State

session, which the industry had been working on.

The preliminary production figures (July, 1961 estimate - by the Statistical Reporting Service of the U. S. Department of Agriculture) placed Florida's orange crop at 87,000,000 boxes - tangerines at 5,000,000 and grapefruit at 31,800,000 - for a grand total of 123,800,000 boxes of citrus. A further breakdown placed early and mid-season oranges at 47,000,000 - Valencias 36,000,000 - Temples 4,000,000 - seedless grapefruit 19,400,000 and 'other' or seedy at 12,400,000 boxes. Compared with the year previous, there was considerable variation in some classes, but the over-all difference in the grand total was just 1,000,000 boxes less. By varieties - Temples were practically the same as a year ago, or up a mere 100,000 boxes. Early and Mid-season oranges increased nearly 2,000,000 boxes or 1,900,000 boxes. Valencias showed the most pronounced difference - or were down 6,500,000 boxes from the preceding year. Tangerines, at an even 5,000,000 boxes, increased 2,200,000 boxes. For grapefruit - seedless was very similar in production to last season, or estimated at 19,400,000 boxes in contrast to 20,100,000 in 1959-60. Seedy or Duncan grapefruit increased an even 2,000,000 boxes, or was estimated at 12,400,000 compared to 10,400,000 boxes a year ago.

Plantings of citrus trees in the State, for the year ending June 30, 1960, were again very heavy and were exceeded only by the 1958-59 plantings, when an all-time record was established for the 32-year period beginning with the 1928-29 season. Common varieties, which exceeded the 1958-59 totals, included Parson Browns, Valencia and Pope Summer oranges - Marsh Seedless and Thompson grapefruit - tangelos and mandarins.

The combined total of fresh citrus shipments from Florida, during the 1960-61 season, were again considerably lighter - or slightly more than 7,000 cars under the movement of the previous year. However, the grand total of rail, truck, express, and 'mixed' citrus broken down into the proper proportion, still exceeded 60,000 cars or amounted to 60,337 cars. Fresh orange shipments were exceedingly light, while the movement of grapefruit held up well. Tangerines, with a late maturing crop, was the most surprising of all, with better than a 50 per cent increase in shipments - or 2,300 cars more than a year ago. With the proper proportion of 'mixed' cars taken into count - oranges totaled 25,557 cars compared to 33,864 in 1959-60, or better than 8,000 cars less. Grapefruit, on the other hand, showed relatively little change, or totaled 28,423 cars in 1960-61 as compared to 29,663 the season previous - a little more than 1,000 cars under 1959-60. Tangerines, however, totaled 6,357 cars in contrast to only 4,043 a year ago. The percentage of Florida citrus moved via truck did not increase during the 1960-61 season for the first time since trucks became a major factor in transporting fruit to market. However, the difference was only slightly less than that of a year ago - or 64.3 per cent by truck and 35.7 via rail. The movement via truck of oranges, grapefruit and tangerines from the State - all were less than 2 carlot equivalents to 1 car rail in 1960-61, while the year preceding, oranges were better than 2 to 1.

The 1960-61 seasonal auction averages for Florida citrus showed considerable variation. Oranges, with an all-time low total of only 2,290 cars at the 8 terminal markets having auctions - sold at the outstanding average of \$6.48 - an all-time high - and exceeding the previous record mark for 1958-59 by 40¢ per 1-3/5 bu. box. For the same terminal auctions, grapefruit showed little change in the average prices of that a year ago - although the volume moved was down approximately 500 cars from 1959-60. 4,445 cars of Florida grapefruit sold at a per box average of \$4.32 in 1960-61 com-

pared to 4,941 cars at \$4.41 the preceding season. In contrast to oranges and grapefruit, where there was less volume sold at auction in 1960-61 - tangerines, as would be expected with increased shipments, totaled 1,170 cars which sold at an average of \$3.09 per 4/5 bu. box compared to 917 cars at \$3.97 in 1959-60. Temple oranges, with noticeably less volume, sold 48¢ per one-half or 4/5 bu. box higher than the previous year. The Temple auction average for 1960-61 was \$3.56 for 740 cars compared to an average of \$3.08 for 922 cars a year ago.

The combined cannery utilization in 1960-61, as compiled by the Florida Citrus Commission, approached the 87,000,000 box mark - or amounted to 86,643,524 boxes of citrus used. As in recent previous years, the volume of oranges utilized was well over 3,000,000 boxes during the 6 heaviest weeks or the period immediately following the first of the year. In fact, for the heaviest week, or the one ending Jan. 28th, nearly 4,000,000 boxes were used, or 3,721,920. The amount of grapefruit utilized followed a more even trend, with the heaviest weeks extending over a much longer period, or beginning with the week ending Jan. 7th and continuing through the week ending Apr. 29th. However, there were 3 particularly heavy weeks during this period, or consecutive weeks ending Mar. 11th through the week ending Mar. 25th. In two of these weeks over 800,000 boxes of grapefruit were used weekly, with the 3rd one considerably in excess of 700,000 boxes. Tangerines, with a seasonal utilization of nearly 1,600,000 boxes, had relatively heavy weeks - both before the Christmas holidays and following. The peak week of the year was the one ending Jan. 7th with 165,000 boxes used. There were 2 weeks prior to the holiday period when over 100,000 boxes were utilized and there were 6 weeks following in 1961 when the same amount was exceeded.

The delivered cannery prices (furnished by the Florida Cannery Association) showed a wider spread from that of the preceding season. For oranges, the seasonal delivered price was sensationally higher, or nearly \$1.00 a box more for concentrate fruit as well as for juice. The average for oranges used for concentrate in 1960-61 was \$3.46947 a box in contrast to \$2.53841 the year previous. The difference in the juice price was also practically the same, or \$2.95767 compared to \$2.01367 in 1959-60. The low point for concentrate oranges was at the start of the '60-61 season, or during the first part of December when for the week ending Dec. 17th, the delivered price was \$2.55293 per box and practically the same for the preceding week, or \$2.55611. The price advanced steadily to the peak of \$3.94015 for the week ending Mar. 4th or towards the close of the mid-season fruit. Another low was at the beginning of the Valencia season when the delivered price was \$3.16234 for the week ending Mar. 25th. Again, the price advanced upward to another peak towards the close of the season, when \$3.87210 was reached for the week ending June 3rd. The price of juice oranges opened at a low figure of 1.75000 per box delivered for the week ending Oct. 22nd. A steady advance was maintained until the last 2 weeks in December, when the price reached above the \$3.00 per box mark, and held around this figure for the remainder of the season, for a seasonal average of \$2.95767. Delivered cannery grapefruit for juice showed a wide range in prices - opening at a low mark of 0.33864, advancing to more than \$1.00 for the most of January. Then, there was a steady decline until the week ending Apr. 1st when the average was 0.55570. This was followed by a 2nd consistent advance to over \$1.00 for most of May. Towards the end of the season, prices again dropped sharply and the seasonal average was 0.86072. Grapefruit for sections held very consistent at around \$1.50 delivered per box, except towards the close of the season, when there was a decline. The seasonal average for sectionizing fruit was \$1.49957 per box. Juice tangerines varied from a delivered low price of

O.52452 for the week ending Dec. 3rd to a top of \$1.24472 for the week ending Jan. 7th. The seasonal average was \$0.93527 delivered per box.

The 1960-61 frozen concentrate orange pack was the highest in Florida's citrus history - exceeding the previous high of 1958-59 by more than 4,000,000 gallons, for a total of 84,298,114 gallons. Chilled orange juice accounted for 5,678,701 field boxes; and chilled orange sections and salad used more than 600,000 field boxes or a total of 618,745. The number of field boxes of grapefruit used for chilled juice, sections and salad was well over 1,000,000 or totaled 1,195,110.

The distribution of Florida citrus, in 1960-61, was tabulated in a different form from that of previous seasons. For 41 cities, in the United States, unloads of Florida oranges totaled 4,954 rail, 8,675 truck -- a grand total of 13,629 cars - considerably more than 1/2 of the total shipments. The 5 Canadian cities accounted for 795 cars of Florida oranges, rail and truck. In addition, the remaining miscellaneous U. S. cities for which rail unloads only are available, accounted for 329 cars to bring the grand total to nearly 15,000 cars of Florida oranges unloaded from Sept. 1, 1960 through July 30, 1961, or 14,753 cars - exclusive of the proper proportion of 2,371 cars of 'mixed' citrus tabulated in the 41 U. S. cities. The number of foreign countries represented in the 5 Canadian cities unloads increased. Reported were citrus unloads from Cuba, Brazil, Formosa, Israel, Japan and South Africa. For the 41 U. S. cities, the combined total oranges unloaded, rail and truck, for Florida, California, Texas and Mexico (excluding Louisiana and Cuba) was 33,873 cars. Florida accounted for the 'lions' share of the grapefruit unloads, rail and truck - for the 41 U. S. cities - or totaled 6,581 cars rail and 9,100 truck - for a grand total of 15,681 cars. The combined grapefruit unloads for Florida, California, Arizona, Texas and Mexico total was 7,876 rail and 15,030 truck - for a grand total of 22,906 cars. Canada was a good customer for Florida grapefruit, with the 5 Canadian cities reporting unloads of nearly 2,600 cars. Compared with a year ago, Texas increased their truck unloads of grapefruit by 1,000 cars or verifying the increasing competition from this State. Tangerines, which until only comparatively recent seasons, was an exclusive Florida crop, now has some competition from California, Arizona, Texas and Mexico. Florida, however, accounted for 3,855 cars of the 4,470 reported unloaded via rail and truck from the above listed States and Mexico. Mixed citrus unloads, rail and truck, for the 41 U. S. cities total 3,411 cars of which Florida had 2,371. California reported 376 cars of mixed citrus - and Texas, a surprising 646 cars.

For l. c. l. shipments of "mixed" cars via express and the average rail load of Florida citrus for the 1960-61 season

CHARACTER OF THE 1960-61 SEASON

Generally, the season's weather was somewhat more favorable than that of the past few winters. Warm weather prevailed all of November. December and January and the first half of February were rather cold - some crop damage occurred in most areas, but was generally light. The latter part of February and March was warm - marred only by the freezing temperatures and frost on March 11.

Hurricane Donna, which crossed the State from Naples to Daytona Beach on September 10-11, caused considerable loss to citrus - fruit blown off trees - with the greatest loss being from Lee County northward across southern Polk County, and lesser amounts in the northern citrus belt. Donna's heavy rains and additional rain, in September and October kept fields rather wet until the latter part of October.

NOVEMBER was warm and rather dry. It was very dry in central sections - many stations did not have a measurable amount of rain for the entire month.

DECEMBER opened rather cold. The frost and near freezing temperatures of the first five days was confined to the extreme north portion. From the 14th to the 27th, frost and freezing temperatures were general over the north and central areas of the State. Citrus damage was confined to the colder unprotected locations. Rainfall in most areas was light.

JANUARY was cold with quite frequent frosts in the north. The coldest for all areas was the 21st through the 23rd, with temperatures in the low and mid-20s in the colder locations of north and central areas and in the backlands of the Everglades. Citrus damage was again slight and confined to the colder locations. The prolonged cold to cool weather enhanced the color of citrus. Rainfall during the month was spotted with below normal amounts in central and above normal in the north, while a few places on the Lower

CHARACTER OF THE 1960-61 SEASON CONTINUED

East Coast had excessive amounts.

FEBRUARY had a number of moderately cold days and nights the first half of the month. While a warm second half was marred only by one cool period the 26th-27th, rainfall was above normal in the north, near normal in central, and below normal in the south.

MARCH had below normal rainfall and was generally warm. However, the frost and freezing temperatures on the 11th caused some spotted damage to young citrus trees in the coldest locations, to tender crops in most sections of north and central Florida, increasing to a loss of 50-60 per cent of the beans and sweet corn crops in the Everglades. A severe thunderstorm with large hail, completely covering the ground in some sections of Lakeland and to north of Plant City occurred on Mar. 18, with a lesser amount on the 19th.

Orange trees had a heavy bloom and set by early March. Bloom on grapefruit and tangerines was somewhat later and generally light. Citrus trees were in excellent condition by the end of April.

Rainfall distribution from April through Mid-August was very spotty, and groves in some areas suffered from lack of moisture. Thundershowers the last half of August were more general and by the end of the month most areas had good moisture.

#-Additional Rail Unloads - UNITED STATES -- None.
 CANADA -- None.

#-Additional Truck Unloads- UNITED STATES -- New Orleans- Louisiana 23 -- New York City- Cuba 1
 CANADA -- None.

EXPLANATION- Where rail unloads show State of Origin & no shipments shown to cover - due probably to 'mixed' cars being reported as to predominating commodity

UNLOADS, RAIL & TRUCK - MIXED CITRUS - 41 U. S. CITIES & 5 CANADIAN CITIES.
FROM SEPT. 1, 1960 THRU JULY 31, 1961 - BY STATES OF ORIGIN

Carlots rail include boat - Truck & boat converted to carlot equivalents on basis 500 boxes

 shaddock and other citrus 8,442

L. c. l. shipments of 'mixed' cars (consolidated into carlots) via express for Florida totaled 4,723 for the 1960-61 season.

The average rail load of Florida citrus for the 1960-61 season (as compiled by the Florida Citrus Exchange at Tampa, Florida) was 505.6 boxes.

Segregated: Oranges 497.5 - Grapefruit 509.3 - Tangerines 521.9.

The conversion factor of 500 boxes -- used in converting truck shipments to carlots.

CITRUS SHIPPING HOLIDAY - "This regulation prohibits the shipping and packing of all varieties of oranges, grapefruit, tangerines and tangelos between the production area and any point outside thereof in the continental United States, Canada or Mexico for the period beginning at 12:01 a/m, e. s. t., Dec. 23, 1960 to 12:01 a/m, e. s. t., Dec. 29, 1961."

Shipments exempt from this regulation:

Express shipments of the gift package type.

Exports to foreign countries other than Canada or Mexico

Shipments for use within Florida, except shipments west of the Suwannee River.

Shipments for canned or frozen products or beverage base.

Shipments for charity or Government relief.

By Marketing Agreement Committees,
Lakeland, Florida.

Detailed auction data for California citrus for the 1960-61 season may be obtained from the Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California.

Commercial shipments of citrus from Texas were again considerably heavier in 1960-61. L. c. l. shipments of 'mixed' citrus - via express - from Texas totaled 419 cars. By months as follows: Nov., 46 - Dec., 276 - Jan., 52 - Feb., 33 - Mar., 12 - cars.

Additional information on Texas citrus may be obtained from R. E. Winfrey, Market News Service, U. S. Dept. of Agriculture, P. O. Box # 13, Weslaco, Texas.

MARKETING FLORIDA CITRUS
SUMMARY OF 1961-62 SEASON

by

H. F. Willson

Lakeland, Florida

October 8, 1962

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Foreign Agricultural Service; the Citrus Inspection Division, Florida Department of Agriculture; the Federal-State Frost Warning Service; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Cannery Ass'n, the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida; and the State Plant Board of Florida.

Shipments, unloads, & other similar data for the 1961-62 season are subject to revision on account of late and corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1961-62 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 9, 1961 to June 27, 1962 inclusive

GENERAL COMMENTS

The 30 percent increase in Florida's orange production - or nearly 1/3 more than the 1960-61 figure of 86,700,000 boxes - was the State's most imposing citrus development and discussed topic of the 1961-62 season. A 100 million box orange crop that had been talked about for several seasons as Florida's potential became history with the U.S.D.A. Statistical Reporting Service July 1, 1962 estimate of 113 million boxes. Despite the prolonged drought periods throughout most of the State's citrus producing areas during a greater part of the growing period and a general freeze in late December, 1961 - most acreage far exceeded early expectations by over picking all during the season and offset any losses by adverse weather.

The very light California orange crop and the January disastrous freeze in Texas were major favorable factors in the marketing of Florida citrus in 1961-62. However, within the past 10-year period, there were 3 consecutive seasons when the total United States production of oranges was nearly the same as '61-62. These occurred in 1954-55, 1955-56 and 1956-57. In these seasons however, California's orange production was nearly double what it was in 1961-62.

In comparison with the season preceding, Florida's fresh orange and grapefruit shipments increased substantially, particularly oranges - and there was a heavy pack of most processed products, with frozen orange concentrate in very large volume. An unusually wide distribution, as emphasized by much heavier fresh Florida citrus receipts to the more distant points was the pattern for the season and verified by the weekly detailed combined rail and truck receipts report covering the major markets in the United States. The 'piggy-back' method in railroad transportation continued the weekly heavy schedules of solid train-loads to eastern seaboard markets, but no appreciable increase in piggy-back cars of Florida citrus to midwestern cities was in evidence during the 1961-62 season.

The remarkably long harvesting period was most helpful to the fresh citrus industry in the State. In fact, as late as the week ending Aug. 30, 1962, approximately 1/3 of all receipts of fresh oranges in the New York City area were from Florida and the wind-up of the '61-62 season, along with the opening of '62-63 almost coincided. Exports of fresh oranges (exclusive of Canada) more than doubled, with grapefruit approaching twice the volume of the season previous. Orange prices were relatively good for early and midseason fruit and, for the early part of the Valencia season but then fell off sharply. Both Florida grapefruit and tangerines enjoyed much better marketing positions than oranges, and an effective volume pro-rate was placed in operation for Indian River grapefruit. Texas was eliminated as a fresh grapefruit competitor following the devastating freeze in January, 1962. Florida's tangerine crop dropped nearly 1,000,000 boxes from 1960-61 and there were 14 years during the past 20 when the State had more tangerines.

Preliminary production figures (July, 1962 estimate by the Statistical Reporting Service of the U. S. Department of Agriculture) placed Florida's orange crop at 113,000,000 boxes - grapefruit at 35,000,000 and tangerines at 4,000,000 - for a grand total of 152,000,000 boxes of fresh citrus. A further breakdown placed Early & Midseason oranges at 52,500,000 - Valencias at 56,000,000 - Temples 4,500,000 - Seedless grapefruit 23,800,000 and 'other' or Seedy grapefruit 11,200,000 boxes. Compared with the previous season, there were nearly 30 additional million boxes of Florida citrus - with oranges and particularly Valencias - making up most of the increase. Specifically, Temples increased 1/2 million boxes, Early & Midseason oranges 5 1/2 million, Valencias 20,300,000 and Seedless grapefruit 4,600,000. Tangerines and Seedy grapefruit decreased, with tangerines 900,000 boxes less and 'other' grapefruit 1,200,000 under a year ago. Even though Florida grapefruit increased materially over the '60-61 crop, there have been 5 seasons in the past 20 when the State had substantially more grapefruit than in 1961-62.

Plantings of citrus trees in the State for the year ending June 30, 1961 were again heavy, and set an all-time record for the 33-year period beginning with the 1928-29 season. Varieties, which exceeded the 1958-59 heavy plantings, were Valencias, Hamlins, Queen and Pope Summer oranges - March Seedless & Thompson seedless, and Tangelos.

Florida's combined total of fresh citrus shipments was much heavier than in 1960-61, or 13,364 cars more, which represent commercial shipments only. For the first time, l.c.1 express shipments were tabulated by months and reported separately in contrast to previous seasons when 'mixed citrus' shipments included the State's l.c.1 express movement by days and weeks. Orange shipments showed the largest increase with nearly 10,000 additional cars - or 9,871 to be exact. Grapefruit accounted for nearly 1/2 the increase of oranges - or 4,429 cars above '60-61. With the relatively light crop of tangerines, there was a decrease of nearly 1,000 cars from the previous year - or a decline of 938. All comparisons for oranges, grapefruit and tangerines include the proper proportion of 'mixed' cars (exclusive of all Florida consolidated l.c.1 express cars for both years). For the 1961-62 season, the percentage of shipments that moved from the State was 69 via truck and 31 via rail.

Seasonal auction averages for Florida citrus showed considerable variation during the 1961-62 season. The volume of oranges sold at auction increased slightly, but the average seasonal price for all auctions was the lowest in the past 5 years - or \$5.09 per standard box for 2,509 cars compared to \$6.48 for 2,290 cars the preceding year. Grapefruit, on the other hand, had the highest seasonal auction average of the past 4 years at \$4.49 for 3,773 cars and the volume down nearly 700 cars from '60-61 - or compared to 4,445 cars for an average of \$4.32. Temple orange volume at auction was about on a par with the past 5 years, but the average was the lowest for this period at \$2.88 per 1/2 box for 703 cars compared to '60-61 season with 740 cars

averaging \$3.56. Tangerines were the exception, with both the volume and price up from a year ago. There were 1,353 cars of Florida tangerines sold at auction for a seasonal average of \$3.69 per 1/2 box in contrast to 1,170 cars at \$3.09 the preceding year.

The combined cannery utilization in 1961-62, as compiled by the Florida Citrus Commission, set an all-time record, with nearly 110,000,000 boxes through July 31, 1962 - or 109,722,664 boxes, with some plants still operating on a small scale in August. The peak weeks for oranges were not in the 3,000,000 box classification, but substantially above 4,000,000 boxes, or for the weeks ending Jan. 20th and 27th respectively. In addition, there were 14 weeks in the 3,000,000 plus class with some weeks just missing the 4,000,000 mark. All weeks in January and February exceeded the 3,000,000 box mark. The 2nd heavy orange utilization period started the last week in April with 3,638,381 boxes and continued in the 3,000,000 plus bracket through the week ending June 16, 1962. During this 2nd heavy utilization period, there were 2 weeks ending May 12th and May 19th respectively, when each week's total was more than 3,950,000. For grapefruit, there was only one week (ending Mar. 10th) when the amount utilized was more than 1,000,000 boxes. There were 3 weeks preceding the holidays which were in the 400 to 500 thousand box bracket. Beginning in the 1st week of 1962 and continuing through the week ending Apr. 21st, the weekly grapefruit used ranged from a trifle over 400,000 to the peak week of over 1,000,000 boxes. There were only 3 weeks when the tangerine utilization exceeded 100,000 boxes, or those ending Dec. 16, 1961, Jan 6th and Feb. 3rd, 1962 respectively. As with shipments, the cannery utilization was much heavier for oranges, substantially more for grapefruit, and considerably under on tangerines, than the year before.

The delivered cannery prices (furnished by the Florida Cannery Association) show a sharp break in the seasonal average in 1961-62 compared to the season previous - or were much lower for all classifications except for tangerines which remained within .05¢ of the average price a year ago. The seasonal orange delivered price was approximately \$1.21 a box under the sensationally high season average of 1960-61. Oranges used for concentrate in '61-62 average \$2.25479 a box compared to \$3.46947 a year ago and \$2.53841 two years ago. The difference in the juice average was also similar but not quite so pronounced - or \$1.93894 compared to \$2.95767 the season before and \$2.01367 in 1959-60. The low point for concentrate oranges occurred the last few weeks of the '61-62 season. However, the breaking point was following the week ending Mar. 10th. Prices started out strong during the week ending Dec. 9th or above a \$2.30 average, and ranged from that to nearly \$2.90 for the peak. The 2 high weeks of the season were those ending Feb. 10th and 17th respectively, with averages of \$2.86002 and \$2.87075. The price of juice oranges ranged in the \$1.60 to \$1.70 average bracket for the first 3 weeks of the season, or Oct. 14th through the 28th. Prices increased to more than \$2.00 by the week ending Nov. 18th and remained above \$2.00 through the week of Mar. 3rd. This was followed by a consistent decline to the end of the season, or the week ending Aug. 8th, when the average was less than \$1.25 per box delivered in. Grapefruit for juice was the most regular in price following the opening 4 weeks, or the weeks ending Oct. 14th through Nov. 4th. With very few exceptions, the average held in the .40¢ to .50¢ bracket. For 7 weeks, following the Texas freeze, or beginning with the week ending Jan. 20th and extending through the week ending Mar. 3rd, prices were above .50¢ per box. Top average for the season occurred for the week ending Feb. 24th with .58232. Price per field box for grapefruit sections ranged from a high of \$1.34101 for the week ending Feb. 17th to a low of 0.820000 towards the close of the season, with the average for the season of \$1.13368. Juice tangerines varied from a delivered low prices of 0.35000 for the week ending Apr. 7th to a top of \$1.23219 for the week ending Jan. 20th.

The 1961-62 frozen concentrate orange pack reach an unprecedented high of more

than 116 million gallons, an increase from the previous record of 1960-61 of nearly 32,000,000 gallons. Chilled orange juice continued the consistent steady increase in volume of recent seasons, and accounted for 7,297,700 field boxes. Sections and salads showed only a very slight increase or 672,182 boxes were used. The number of field boxes used for chilled grapefruit juice more than doubled or totaled 336,662 in 1961-62 in contrast to only 139,211 in '60-61. The pack of chilled grapefruit sections and salads remained practically the same as the year before.

Distribution of fresh citrus shipments from the State in 1961-62 was tabulated in the same pattern as a year ago, with the 41 U. S. cities and 5 Canadian cities showing rail and truck for all states, and supplemented by 'rail only' for the remainder of the 100 cities. For the 41 cities in the United States, unloads of Florida oranges totaled 7,275 rail and 11,481 truck - a grand total of 18,756 cars, or nearly 1/2 of the total unloads by all states of origin, as well as considerably more than 1/2 of Florida's shipments. Florida had 106 cars rail and 1,058 truck unloads of oranges in the 5 Canadian cities compared to the total rail of 2,456 and truck 1,493. California accounted for most of the rail unloads to Canada and even Arizona more than doubled Florida's rail receipts to these 5 Canadian cities. In the United States, Mexico with 74 cars and Israel 44, were the only foreign countries represented with unloads. It was a different situation in Canada, which had the following countries represented - Japan, Israel, South Africa, Italy, Formosa, China and Greece.

Florida's unloads of grapefruit in the 41 U. S. cities accounted for considerably more than 1/2 of the State's total shipments and exceeded 3/4s of the unloads from all states of origin. In the 5 Canadian cities, Florida rail and truck totaled 2,819 cars in contrast to 2,970 from all states, or Florida had approximately 95 percent of the grapefruit unloads. Foreign countries with grapefruit unloads in either United States or Canada in '61-62 were conspicuous by an absence. The only grapefruit unloads reported as originating from a foreign country was Central America with 5 cars in Canada.

As usual, Florida accounted for the 'lions share' of the tangerine unloads in both the United States and Canada. For the United States, Florida had 3,123 cars out of a total of 3,820, while in Canada the total was 265 of the total 332. However, more states are represented in the tangerine unloads to a greater degree. As an example, California was in the 500 car classification, or 496 to be exact, for the 41 cities, with Mexico next in line with 104 cars for the 41 U. S. cities, and 66 for the 5 Canadian points. There were nearly 3,000 cars of 'mixed' citrus from Florida received in the 41 U. S. cities. A

As to the miscellaneous U. S. cities, the unloads of Florida citrus via rail only were as follows: oranges 394, grapefruit 248, tangerines 67 and 'mixed' cars 7.

For l. c. 1 shipments of 'mixed' cars via express and the average rail load of Florida citrus for the 1961-62 season

W E A T H E R
CHARACTER OF THE 1961-62 SEASON

Furnished thru the courtesy of the Federal-State Frost Warning Service - Lakeland, Florida

The 1961-62 season was warm until Christmas. Cool weather persisted from then until February, punctuated by several moderately severe cold spells. December 26th, 30th & January 13th were the most damaging of these for the peninsula as a whole. February was abnormally warm. March was rather cool, with a few days of high winds. Unseasonably late frosts occurred in April. Drought conditions existed over most areas throughout the season, with only minor and temporary alleviation in March and early April.

November - was dry and warm, except for a few minor cold periods limited to the extreme north portion of the State. Freezing temperatures were confined to the northern portion of the Gainesville district and occurred only on the 30th. Rainfall totals were mostly less than 1 inch over the southern 2/3 of the peninsula and 1 to 3 inches over the northern 3rd.

December - was a dry month and mild until the 25th, when temperatures ranged from the high 20s in the northern districts to the high 30s in the lower east coast farming areas. Frost was mostly light and scattered. On the 26th, minimum temperatures with heavy frost, ranged from the low & middle 20s in the north and central districts - to high 20s with moderate to heavy frost in the Everglades - to the low 30s with scattered light frost in the lower east coast farming areas. There was extensive damage to unprotected tender truck and ornamentals, and some damage to hardy truck southward thru the Everglades, and spotty damage in the extreme south portion. Damage to citrus was confined mostly to the fruit, tender growth, and young trees in the colder, unprotected locations. On the 29th, with temperatures in the high 20s and low 30s in most areas, there was very little frost or damage. The coldest night of the season, December 30th, had temperatures in the low 20s and a few teens in the northern districts - mostly in the 20s in central districts and the Everglades - while the lower east coast farming areas had high 20s and low 30s. Frost was general over the peninsular, except scattered over the extreme south portion. Damage to unprotected citrus, vegetables and ornamentals was similar to that of the 26th, described above. Considerable defoliation in some unprotected groves also resulted. Low temperatures on December 31st ranged from the low 20s in the extreme north portion to near and slightly below freezing in the central districts and the Everglades for rather short durations. There was very little frost and no additional damage. Precipitation totals generally ranged from 1/2 inch in southern counties to 3 inches in isolated locations in west central counties. Most of the rainfall occurred during the last 2 weeks.

January - opened cool with scattered frost and/or freezing temperatures over most all farming areas on the 3rd and 4th, except for the high 30s to lower 40s in the lower east coast district on the 4th. Cool to mild weather followed until the freeze on the 13th. This freeze was a result of one of the most extensive and bitter cold Arctic air masses experienced in the United States during this century. It covered the northern portion of Mexico and all of the United States, except peninsular Florida from January 10th-13th. Texas citrus suffered severe damage and California citrus moderate damage. High level winds, mostly southwest to west-southwest, over Florida and the Gulf of Mexico, slowed the southward movement of this air mass, keeping it from moving over

CHARACTER OF THE 1961-62 SEASON
CONTINUED

Florida until January 13th. By this time the air mass had warmed up some 10 to 20 degrees. Even so, temperatures with moderate to heavy frost, ranged from the high teens and low 20s in the northern districts - to the low and mid-20s in central - to the high 20s in the Everglades - and above 35 degrees with no frost in the lower east coast area. Additional damage occurred to unprotected citrus and remaining tender truck, and ornamentals in the colder locations of the north and central districts. In the Everglades, damage was spotty on the 13th, however, the strong winds of the 6th caused considerable damage, and the prolonged cold reduced growth, yield and quality. Mild to cool weather prevailed from the 14th until the 30th, when temperatures dropped to the 30s with light frost in north and central districts. Temperatures in the low 30s, with scattered frost was confined to the Everglades on the 31st. January experienced a high frequency of foggy nights and below normal rainfall.

February - was dry and very warm. Scattered, near freezing temperatures, with negligible damage occurred in minor cold periods on the 7th and 12th in the north and central counties. Precipitation totals were generally 1/2 to 1 1/2 inches, except amounts near 3 inches locally in the north-central counties.

March - was predominately cool, and a poor growing month in most areas with precipitation averaging 2 to 4 inches. Strong, cold, dry winds the first week caused considerable damage to tender vegetables in all areas. March 8th was the coldest with heavy frost and minimums in the high 20s and low 30s in the northern districts - low and mid-30s with scattered frost in central and the Everglades - and middle and high 30s and scattered light frost in the farming lands of the lower east coast district. Moderate to heavy damage occurred to unprotected vegetables as far south as the Everglades, and spotty damage on the lower east coast area, but no citrus damage. The 6th, 7th - 18th and 19th were also cold with near freezing temperatures in the colder locations of the north and central districts, and light frost in the Everglades on the 7th. Most citrus had set a good bloom by late February and March, and the trees were generally in very good condition.

April - started cold with very scattered light frost in the extreme north on the 3rd and 4th. The last cold spell of the spring, one of the latest on record, occurred on April 17, when scattered frost and temperatures in the 30s occurred in the north and the interior of central districts. Rainfall in April was below normal in most areas except for a few locally heavy showers.

May and July - rainfall was also below normal in most areas, except for a few locally heavy showers.

June - had frequent showers which gave most areas above normal rainfall.

#-Additional UNLOADS - RAIL - UNITED STATES -- None
 CANADA -- None

#-Additional UNLOADS - TRUCK - UNITED STATES -- None
 CANADA -- None

EXPLANATION- Where rail unloads show State of Origin & no shipments shown to cover - due probably to 'mixed' cars being reported as to pre-dominating commodity.

CITRUS UNLOADS - RAIL ONLY - MISCELLANEOUS U. S. CITIES - BY STATES OF ORIGIN

SEPT. 1, 1961 THRU JULY 31, 1962

- Boat Converted to Carlot Equivalents -

shaddock and other citrus 156 38,312

L. c. 1 shipments of 'mixed' cars (consolidated into carlots) via express for Florida total 2,236 during the 1961-62 season.

The average rail load of Florida citrus - 1961-62 season (as compiled by the Florida Citrus Exchange at Tampa, Florida) was 512.1 boxes. Segregated as follows: Oranges 507.1 - Grapefruit 513.9 - Tangerines 534.4

The conversion factor of 500 boxes -- used in converting truck shipments to carlots.

CITRUS SHIPPING HOLIDAY - "This regulation prohibits the shipping and packing of all varieties of oranges, grapefruit, tangerines and tangelos between the production area and any point outside thereof in the continental United States, Canada or Mexico for the period beginning at 12:01 a/m, e. s. t., Dec. 21, 1961 to 12:01 a/m, e. s. t., Dec. 29, 1961."

Shipments exempt from this regulation:

Express shipments of the gift package type.
Exports to foreign countries other than Canada or Mexico.
Shipments for use within Florida, except shipments west of the Suwannee River.
Shipments for canned or frozen products or beverage base.
Shipments for charity or Government relief.

By Marketing Agreement Committees, Lakeland, Fla.

Detailed auction data for California citrus for the 1961-62 season may be obtained from the Federal-State Market News Service, 300 Wholesale Terminal Bldg., Los Angeles, California.

Commercial shipments of citrus from Texas were drastically curtailed in 1961-62 by the hard freeze in January of several days duration. L.c.1 shipments of 'mixed' citrus - via express from the State totaled 163 cars. By months, the consolidated cars were as follows: November, 23 - December, 140 - January, none. February, none - March, none.

Additional information on Texas citrus may be obtained from 'R. E. Winfrey, Market News Service, U. S. Department of Agriculture, P. O. Box # 13, Weslaco, Texas'.

MARKETING FLORIDA CITRUS
SUMMARY OF 1962-63 SEASON

by
H. F. Willson

2000
E 100
100 / 62

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Foreign Agricultural Service; the Citrus Inspection Division, Florida Department of Agriculture; the Federal-State Frost Warning Service; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Cannery Ass'n., the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida; and the State Plant Board of Florida.

Shipments, unloads, & other similar data for the 1962-63 season are subject to revision on account of late and corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1962-63 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 4, 1962 to June 10, 1963 inclusive

GENERAL COMMENTS

The all-important development of Florida's 1962-63 citrus season was the devastating 'freeze of the Century' occurring Dec. 11th-15th, 1962 inclusive - with the lowest temperatures on the morning of Dec. 13th. In order of importance in the course of coping with this near crisis was the phenomenal volume utilization by the processors of citrus fruit, which had been damaged to varying degrees by the cold temperatures during the 5-day period. Ten years ago, the loss of such fruit would have been tremendous, but in 1962-63 it was held to an absolute minimum, with the Industry still upholding quality standards. Next in order was the prompt declaration of a two week embargo period, followed immediately by the enactment of a program to insure that fresh fruit handlers upheld the State's merchandising regulations. Other important contributing factors were that certain areas, principally Indian River and the 'Ridge' proper, with scattered small sections elsewhere, had relatively small losses. The ability of many groves to make quick and extensive recovery was most helpful also. At the season's close, the volume of fresh shipments totaled 44,361 cars, which was nearly two-thirds of the 1961-62 season's fresh movement. The freeze damage was varied in extent to young and bearing trees (independent of location), depending on variety, age, prior care and culture, as well as root stock and other less important conditions. Generally, seedless varieties fared better than seeded. Throughout the Interior Section of the State, there was a very wide variance in losses. In some instances, citrus acreage, usually little subject to cold damage, was hard hit by the mid-December low temperatures. The volume of Florida citrus sold fresh at the auction markets reversed the decline of the past few years, particularly for grapefruit in the key markets, and the percentage of their total increased by a substantial amount. Florida's seasonal averages for the

combined auction markets were the highest on record for oranges, grapefruit and tangerines, beginning in the late 'teens or in nearly fifty years. Compared to seasons of the past decade, the shipping period was shortened considerably, with only a few cars of citrus moving from the State during the first part of July and not a single box in August. Imports were much heavier than in normal years, and Mexico supplied the bulk of this volume. Other Countries represented included Israel and the West Indies.

Preliminary production figures, released by the Statistical Reporting Service of the U. S. Dept. of Agriculture, placed Florida's 1962-63 orange crop (including Temples) at 76,500,000 boxes, grapefruit 30,000,000, tangerines 2,000,000, tangelos 750,000 - for a grand total of 109,250,000 boxes of fresh citrus. A further break-down placed Early & Mid-season oranges at 45,500,000 - Valencias 29,000,000 - Temples 2,000,000 - Seedless grapefruit 20,000,000 and 'other' or Seedy grapefruit 10,000,000. As an indication of what the potential 1962-63 crop was before the December, 1962 freeze - the December 1st crop report placed all Florida oranges at 120,500,000, grapefruit 38,000,000, tangerines 4,300,000, tangelos 800,000 - for a grand total all-time high of 163,600,000 boxes.

Plantings of citrus trees in the State for the year ending June 30, 1962 were only a few thousand less than the record number of the previous year. Orange plantings were practically the same, but grapefruit was down nearly one-third. Tangelos were just slightly under the 1961 plantings, while mandarines, limes, lemons, and 'miscellaneous' other citrus showed substantial increases. The number of all citrus trees planted for the year ending June 30, 1962 approached the 3,000,000 mark or totaled 2,819,452. The practice of 'banking' young citrus trees against cold damage was a most helpful factor in cutting down losses from the disastrous Dec. 11-15, 1962 freeze.

Florida's combined volume of fresh citrus shipments were 25,008 cars less than the previous year. This was the second season l.c.l express shipments were tabulated by months and reported separately in contrast to prior years when 'mixed' cars of citrus included the State's l.c.l express movement by days and weeks. For 1962-63, the orange movement showed the greatest decline, or dropped 16,147 cars to be exact. Grapefruit shipments held up surprisingly well with only a decline of about one-half that of oranges, or decreased 7,068 cars. The tangerine movement dropped 1,793 cars or from 48,888 cars in 1961-62 to 3,095 in 1962-63. All comparisons for oranges, grapefruit and tangerines include the proper proportion of 'mixed' cars (exclusive of all Florida consolidated l.c.l express cars for both years). For the 1962-63 season, the percentage of shipments that moved from the State via rail totaled 76.56 per cent and via truck 23.44 percent. No comparison will be made on the 'piggy-back' movement, due to an extended railroad strike situation in the State and the shortened season.

As to be expected, auction prices were very high in 62-63 - in fact the highest on record. The number of Florida cars of oranges sold at auction in New York City, Philadelphia and Boston approached or exceeded the volume of 1961-62 and the average price for all markets was \$7.73 per full box. However, the total volume of Florida oranges sold at auction was approximately one-fourth less than the previous season, with the mid-western auction markets showing a marked decrease. For grapefruit from the State, it was an entirely different picture. The volume was almost the same as 61-62 and the seasonal average price for all auction markets was \$5.88 a full box. The volume of Temple oranges dropped approximately one-half from the total of the preceding two years, with the seasonal auction average price at \$4.23 per 4/5

bu. box. The tangerine volume sold on the auction markets was also approximately one-half that of 61-62 and the average price per 4/5 bu. box was \$4.37.

The number of boxes used by the Florida canners in 1962-63, as compiled by the Florida Citrus Commission, far exceeded any general expectations immediately following the December freeze, or totaled nearly 80,000,000. There were four weeks immediately after the freeze when the cannery oranges used ranged from well over five million boxes to nearly seven million weekly. Instead of merely three classifications - oranges, grapefruit and tangerines; for the first time there were six or just double, with Temples tangelos and Murcotts added. The heavy period for Temples occurred the first week in January and extended into February, or a period of five weeks when the weekly low figure was just over 100,000 boxes to a high exceeding 170,000 boxes. The high mark for grapefruit was more than doubled the heaviest week in 1961-62, or 2,370,725 boxes for the week ending Feb. 2, 1963 and after the rush was over for oranges. There were six weeks in succession when the grapefruit utilization exceeded more than 1,000,000 boxes weekly, or beginning with the week ending Jan. 12th and extending through the week ending Feb. 16th. There were only two weeks during the entire season when the cannery utilization of tangerines was more than 100,000 boxes weekly, or the weeks ending Dec. 8th and Dec 15th respectively. The largest volume for tangelos used was in a three week period, or for the weeks ending Dec. 15, Dec. 22nd and Jan. 19th respectively. Utilization of Murcott Honey oranges was by far the heaviest for the week ending Dec. 22nd, when nearly one-fourth of the season's volume was utilized.

Unloads of fresh citrus shipments from the State in 1962-63 were tabulated for the 41 cities via rail and truck. For oranges the grand total, both rail and truck, for Florida exceeded well over 10,000 cars, or considerably more than one-half of the State's unloads in the same markets for 1961-62. Without exception, every one of the 41 cities received straight loads of Florida oranges by either rail or truck and, in most instances, both. Distribution extended to such cities as Salt Lake City, Los Angeles, San Francisco-Oakland, Seattle-Tacoma and Portland, Ore. in the far west to most of the large mid-western and eastern terminals in heavier volume. The five Canadian markets received an appreciable amount of import oranges, with South Africa leading - followed by Japan, Israel and Brazil. Grapefruit unloads (combined rail and truck) from the State approached the 15,000 car mark, or 14,733 cars in 1962-63 compared to only 17,429 cars in the same markets a year ago. Again every one of the 41 cities received Florida grapefruit. In fact, the State supplied more than 85 percent of the fresh grapefruit to these markets, with California and Arizona following in that order. Texas supplied less than 20 cars of grapefruit and the same applied to Mexico. There were no other imports of grapefruit reported. For grapefruit, the 41 cities represented over 60 percent of Florida's shipments, with the proper proportion of 'mixed' cars of citrus included. As for oranges, California supplied the lion's share of the total U. S. unloads from all states, while Florida's unloads only slightly exceeded one-third of the total compared to a year ago when Florida exceeded California by an appreciable margin. Even with the December, 1962 freeze, Florida supplied over 1,900 cars of tangerines to the 41 cities as shown in the cumulative unloads for the period Sept. 1, 1962 through July 31, 1963. California was the nearest competitor with slightly more than 600 cars unloaded and Mexico followed with 153, then Arizona with 60, for a grand total of 2,734 cars unloaded in the 41 cities, both rail and truck. Mixed citrus unloads from Florida totaled 1,666 cars with New York City receiving approximately one-half and Philadelphia, Boston and Baltimore unloading more than 100 cars each. California unloads of mixed citrus totaled 417 cars, Arizona 22, Texas 1.

The delivered cannery prices (furnished by the Florida Canners' Association)

showed a wide range in the weekly prices for all classifications, but the seasonal price in some instances coincided quite closely with a year ago, while with others there was a very pronounced difference. The seasonal orange delivered price for concentrate was approximately 45¢ a box more than in 1961-62, but the juice price was about 66¢ less than a year ago. However, the variation in the weekly price was widespread. For concentrate, during December it was mostly around \$1.00, followed by a generally consistent rise, closing at \$7.49387 for the last week of the season or June 8th when last quotations were available. The weekly juice orange price during October, November & December, ranged from approximately 75¢ a box to \$1.26 plus. Then, like oranges for concentrate, was followed by a generally consistent weekly increase in price, with the last published quotations of the season for the week ending Apr. 20th at \$3.47596. For grapefruit juice, the weekly price ranged from 13¢ for the week ending Oct. 13th to 71¢ the last week in December. Then for nine weeks, the range was mostly around 70¢ to 80¢. Beginning with the week ending Mar. 9th, there was a consistent rise to \$1.40 for the week ending Apr. 27th. The season closed the following week with the weekly average of \$1.28557, and the seasonal average at .73838. The seasonal average for sections was practically the same as a year ago, or less than 03¢ difference. Most weeks' average through the first part of January was around \$1.00. Then, beginning with the week ending Jan. 26th, prices advanced to the peak for the season, or for the week ending Mar. 2nd when the average was \$1.78689. The seasonal average was \$1.10738. Tangerine delivered prices were of brief duration - or for only seven weeks, beginning with the week ending Nov. 10th and closing the week ending Dec. 22nd. Prices ranged from 25¢ a box to .96427. The seasonal average was .49443. In closing the paragraph on the 1962-63 delivered cannery prices, it is most worthy to note that the processors used the astounding total of 84 per cent of Florida's orange crop, and more than one-half of the grapefruit crop or 53 per cent.

The frozen concentrate orange pack in '62-'63 approached the 52 million gallon mark or totaled 51,647,737 gallons. Chilled orange juice held up surprisingly well and totaled 5,549,851 field boxes used. Sections and salads were in the same category with 516,116 field boxes utilized. Both of these latter figures were only slightly under the previous season. The number of field boxes of chilled grapefruit juice totaled 241,643. The pack of chilled grapefruit sections and salads practically equalled the year before, or more than 1,000,000 field boxes were used.

oooo 00000000 oooo

The average rail load of Florida citrus - 1962-63 season (as compiled by the Florida Citrus Exchange at Tampa, Florida) was 469.5 boxes --- By kind as follows: Oranges 466.0 - Grapefruit 469.4 - Tangerines 510.8.

The conversion factor of 500 boxes -- used in converting truck shipments to carlots.

Commercial shipments of citrus from Texas continued drastically curtailed in 1962-63 as a result of the hard freeze in January 1962. L.c.1 express shipments from the State totaled 84 cars. By months: NOV. 14 - DEC. 60 - JAN. 5 - FEB. 2 - MAR. 3.

For detailed auction data for California citrus for 1962-63 season, write Federal-State Market News Service, 300 Wholesale Terminal Bldg., Los Angeles.

CHARACTER OF THE 1962-63 SEASON

This was a cold season, with temperatures below normal every month but March throughout most of peninsular Florida. There were 65 cold cold nights (36° or lower) somewhere in the State, and the big freeze of Dec. 11-15, 1962 caused the greatest loss of citrus trees and fruit, as well as other crops, in the entire history of Florida's expanded agricultural industry. However, there have been other freezes in this century with lower minimum temperatures, but these extreme lows were mostly confined to low ground and frost-pocket locations. On Dec. 13, 1962, temperatures were equally as cold on high and low ground locations; and only the Indian River Section, southeastern Polk and Highland Counties and extreme south Florida escaped heavy citrus losses. Had it not been for the severely cold weather however, during the period from Dec. 11th to 15th, it would have been a good season for most agricultural crops. Rainfall was generally adequate until near the end of the season. March was extremely dry in Southern Districts, as was the last half of March in North and Central Districts. The dry spell continued to early May in most areas of the State and had reached drought proportions in the preponderance of groves and fields before relief came the first week in May.

NOVEMBER - was unseasonably cool throughout the peninsula. Near freezing temperatures occurred in the colder locations in northern counties as early as the 6th, and a cold spell Nov. 11-12 resulted in considerable damage to tender truck in North and Central Districts, and spotted damage as far south as the Everglades. Other minor cold spells on the 15th and 27th caused little additional damage. Precipitation totals in most counties averaged one to three inches with some four to five inch accumulations in south central counties, and in isolated localities on the Lower East Coast.

DECEMBER - was predominately cold during the first two weeks. Scattered frost extended over North and Central Districts on mornings of the 7th and 9th - southward into the Everglades on the 8th and 10th - with only minor damage. On the 11th, widespread frost and long durations of freezing temperatures occurred in all areas. The Lower East Coast

District, as well as some areas east and south of Lake Okeechobee, experienced lowest temperatures of the season. High ground temperatures were 5 to 10 degrees warmer than low ground temperatures. Damage to citrus was spotted and generally minor; truck and ornamentals suffered heavy damage. On the 12th, the Northern and Everglades Districts experienced temperatures in the low 30s with a few high 20s, while the Central and Lower East Coast Districts recorded temperatures in the 40s. All damage was minor. On the morning of the 13th, Florida experienced the coldest temperatures in most areas. It was windy, with severe cold advection and no temperature difference between high and low ground. Citrus damage was extensive; tender truck and ornamental damage was severe to unprotected holdings, except spotted damage in the southeast Coastal areas; and considerable damage to sugar cane in the Everglades. It was relatively calm with widespread frost and freezing temperatures on the 14th. Temperatures on high ground were 4 to 8 degrees warmer than low ground. A moderating temperature trend began during the day of Dec. 14th. Never-the-less minima were quite low on the morning of the 15th, particularly in Southern Districts. Minima on the 16th were generally in the 30s throughout the peninsula, with considerable scattered frost and ice. Low temperatures were mostly in the 40s and 50s and maxima in the 60s and 70s for the following 10 days. Mild weather persisted over the North and Central Districts, and warm over Southern Districts from Christmas until the end of the year. Precipitation for the month was below normal. Totals were generally less than one inch, except one to two inches over the Northern half of the State.

JANUARY - opened moderately cold and, with few exceptions, the entire month was predominately cool. Scattered frost and/or freezing temperatures were experienced in North and Central Districts on the first three mornings and over most of the agricultural areas of the peninsula on the 4th. Low pressure in the western gulf moved eastward and caused rather windy, cloudy and showery conditions over much of the State for the following four days. Colder weather followed in the wake of this storm and on the morning of the 9th, 25-35° readings once again covered the peninsula, and heavy frost was reported as far south as the Everglades. The 30s also occurred on the 10th over all districts, but frost was scattered and generally not as heavy as the previous morning. A rather mild period with foggy nights followed this cold spell until replaced by a cool, cloudy, showery period Jan. 14-17. Mild to warm weather prevailed from the 17th to the 21st. An invasion of moderately cold air on the 21st dropped minima into the 30s with a few high 20s as far south as Central Districts, while Southern Districts remained well above freezing. A few days of mild weather preceded the next penetration of Arctic air into Florida on Jan. 24th. This air mass was colder in the lower levels of the atmosphere and minima in the deep South lower except in Florida than the air mass that caused the disastrous freeze in December. However, the wind and temperature fields in the higher atmosphere prevented a deep penetration of the cold air into Florida. Freezing temperatures covered extreme northern counties on the morning of the 24th. On the 25th, the freezing line only advanced southward to Central Florida and a disaster of calamitous proportions was averted. The cold high pressure system moved rapidly northeastern and by the 26th cloudy, mild and showery weather again covered most of the State. It too was short lived, as another mass of cold air overspread Florida on the 28th when freezing temperatures were observed as far south as the interior sections of Central Districts. Temperatures followed a moderating trend for the balance of the month. Precipitation totals varied widely throughout the State in January. Measurements in Northern Districts ranged from two to eight inches within a few miles; Central Districts one to four inches, and Southern Districts generally one-half to two inches.

FEBRUARY - was a cool, wet month almost without exception as low pressure systems controlled the weather scene most of the time. Average temperatures were generally below normal and precipitation totals above normal throughout most of the peninsula. There were a few minor cold spells with scattered frost on Feb. 9-10, 13-15, 21, 23 and 27-28. None were a serious threat to truck or citrus, but there was light spotty damage to each. More significant was the indirect losses to truck in Southern Districts as a consequence of the cool, wet weather. Here disease control was difficult and occasional periods of strong gusty winds were detrimental. Precipitation totals averaged four to eight inches over most districts with accumulations of as much as eleven inches in the West Coast District, and as low as three inches in the farming areas on the south end of the Lower East Coast District.

MARCH - was generally warm. Precipitation was normal during the first half of the month

over most of the Central and Northern Districts, and much below normal thereafter. Southern Districts were dry the entire month. There were two minor cold spells - the first, Mar. 7-8 which caused no damage; the second, Mar. 21-24, caused some spotty damage on the morning of the 23rd. This included a little damage to new citrus growth in the Gainesville District where some 28° readings occurred; melons in Marion County, tender truck in mucklands of the Orlando District; and beans and young corn in the Everglades District. Precipitation totals generally ranged from one to three inches over the northern half of the peninsula and less than one inch over the southern half.

APRIL - Generally was a warm month, except for scattered frost in the mucklands of Central Districts on the 16th. Precipitation averaged two to three and one-half inches below normal.

MAY - had near normal temperatures and an abundance of rainfall, generally one-half to two inches above normal except some locally heavier amounts. Avon Park has 13.06 inches and Bartow 9.40 inches for the month.

JUNE and JULY - warm months with generally slightly below normal rainfall, but in most areas moisture was adequate.

EMBARGO ON CITRUS FRUIT ---

On Dec. 16, 1962 - the Florida Citrus Commission adopted Regulation No. 105-1.39

This Regulation places an embargo against the sale shipment or transportation of any citrus fruit for any purpose (except to canning and concentrating plants for processing), for a period of 10 days, beginning at 6:00 P.M., Monday, Dec. 17, 1962, and ending at 6:00 P.M., Thursday, Dec. 27, 1962.

In addition, for a period of 14 days, beginning at 6:00 P.M., Dec. 27, 1962 and ending at 6:00 P.M., Jan. 10, 1963, no citrus fruit in the State of Florida showing damage as defined by Section 601.89, Florida Statutes, shall be sold or offered for sale or transported for any purpose whatsoever, other than diversion from all channels of human consumption, except to canning or concentrating plants for processing.

This embargo applies to all sales, shipments, etc., including express, roadside stand sales or any other sales.

CONFIDENTIAL

FOREWORD

The Federal-State Market News Service a co-operative agency of the U. S. Department of Agriculture and the Florida Department of Agriculture, submits this annual summary for the 1963-64 season.

The daily citrus reports were issued at Lakeland, Florida from various reports released by the U. S. Department of Agriculture, Washington, D. C.; Florida Crop & Livestock Reporting Service; the Citrus Inspection Division, Florida Department of Agriculture; the Federal-State Frost Warning Service; the Florida Citrus Commission; Florida Citrus Exchange; Florida Citrus Mutual; Florida Citrus Marketing Agreement Committee; Florida Cannery Association; Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

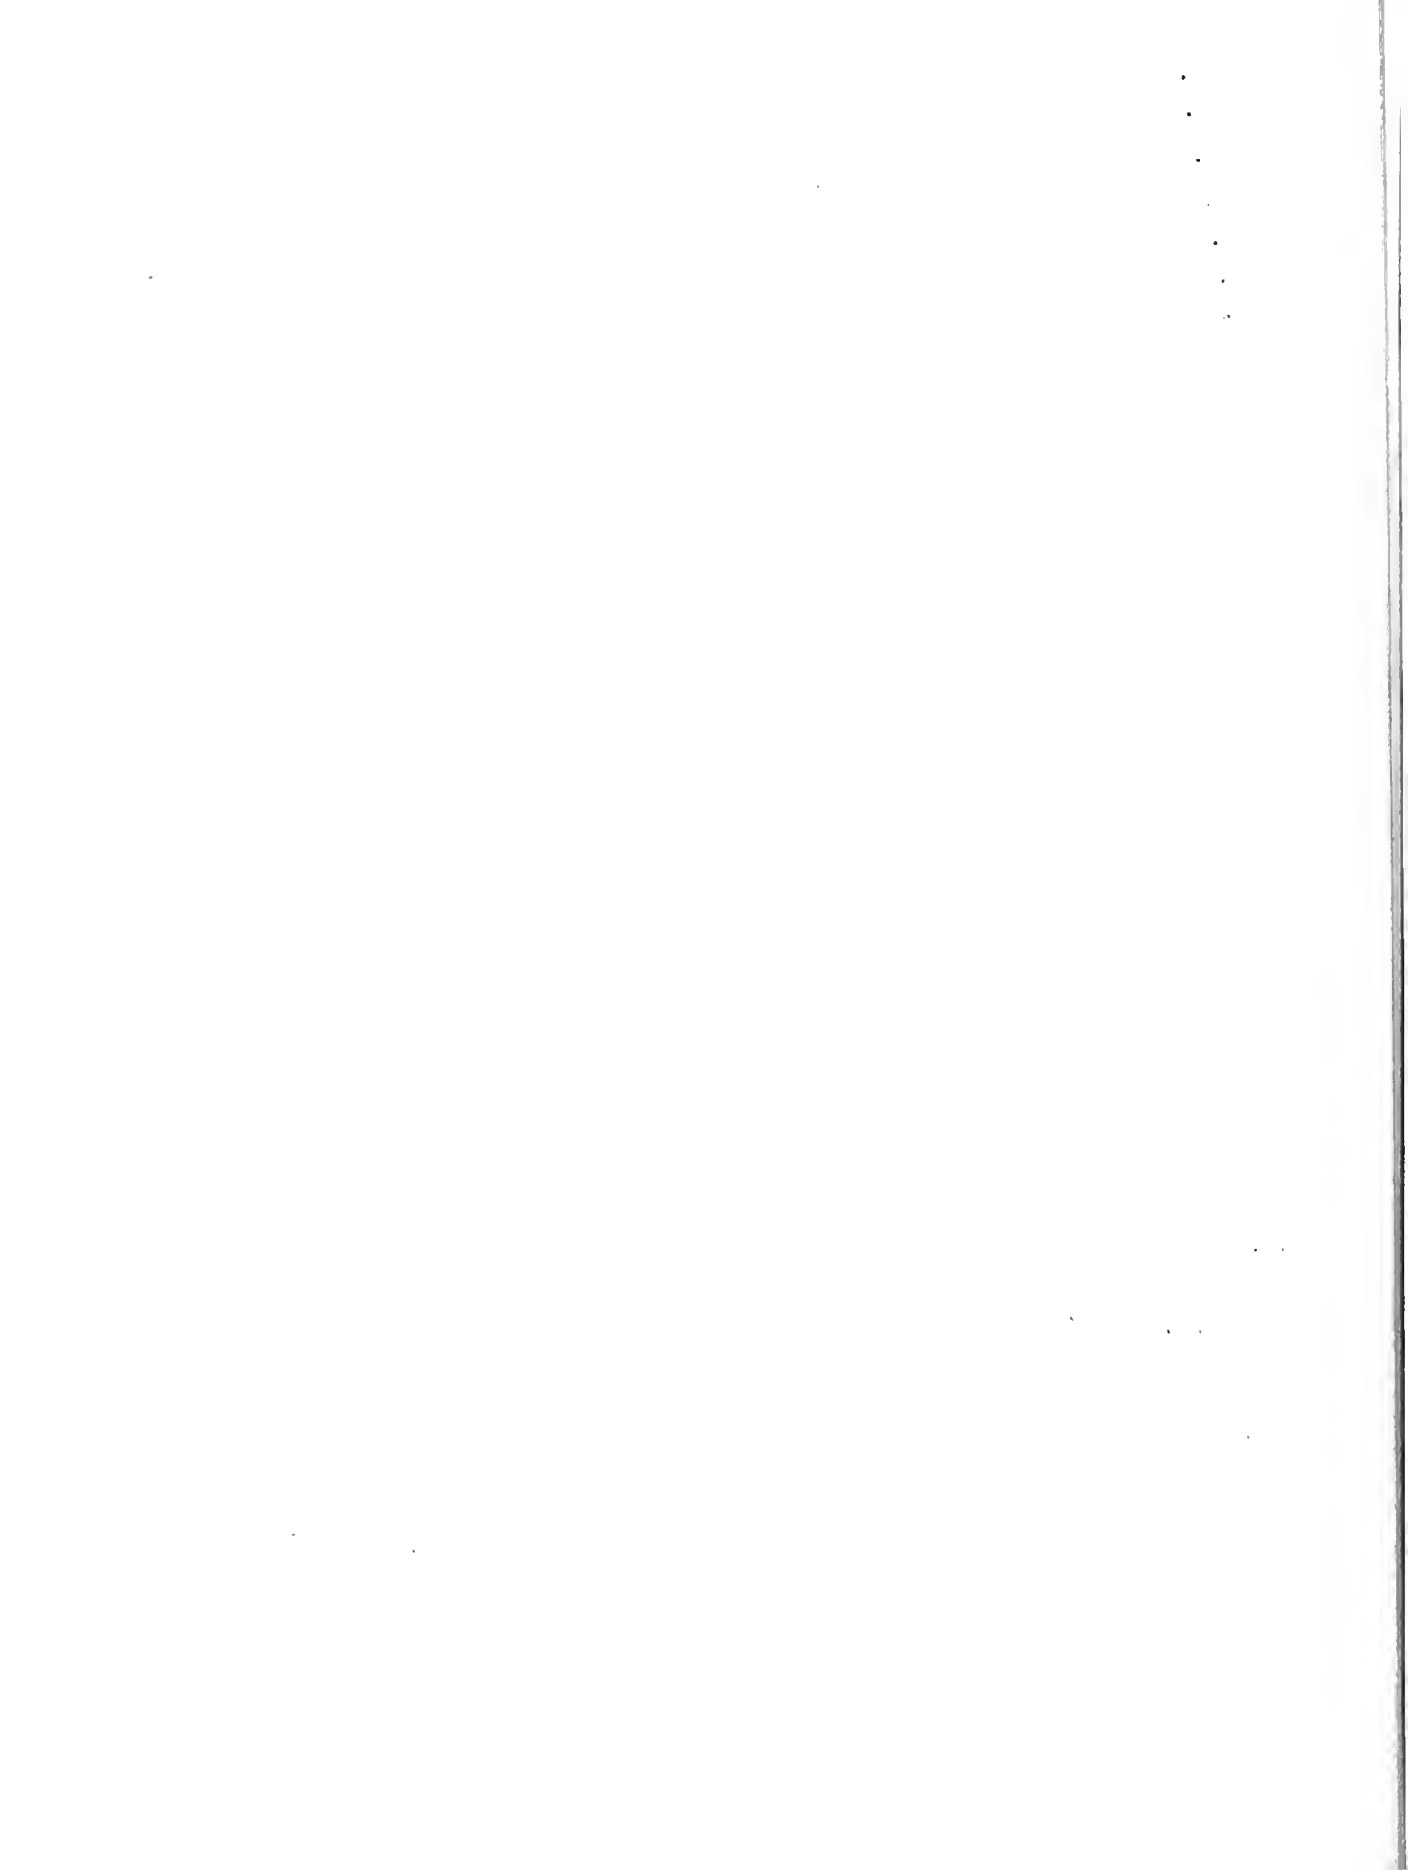

Late and corrected reports which are not yet available may cause revision of shipments, unloads and other similar data, for the 1963-64 season. Every effort has been made to include data in this summary which will be of most value to the Citrus Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

We are deeply grateful to the Citrus Industry and related agencies for their fine cooperation in making this summary possible.

MARKET NEWS SERVICE ON FRUITS AND VEGETABLES

MARKETING FLORIDA CITRUS
SUMMARY OF 1963-64 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 1, 1963 to June 1, 1964 inclusive

GENERAL COMMENTS

Florida citrus groves are recovering steadily from the damaging freeze of December 1962, with a total production of slightly over 90 million boxes for the 1963-64 season. It appears that it will be several years before production will reach the pre-freeze level of the record crop harvested in 1961-62 totaling 153,740,000 boxes.

Substantial shifts have occurred in area and age group distribution of tree numbers since the 1962 survey. East coast area indicated a two million tree increase, 80 percent of which is oranges. But this was far more than offset by a combined loss of 5.9 million trees in upper interior and west coast areas, with 21 and 18 percent loss respectively. Tree numbers increased slightly in the lower interior counties as recent settings more than offset freeze losses.

United States citrus preliminary production figures as released by Statistical Reporting Service of the U. S. Department of Agriculture, for crop year 1963-64, amounted to approximately 149 million boxes, oranges slightly under 92 million grapefruit approximately 34½ million, lemons 17,940,000, tangerines 3,600,000, tangelos 900,000, limes 450,000. Florida breakdown on all citrus fruits as follows: Oranges (including temples) 58,300,000 boxes, grapefruit 26,800,000 boxes, tangerines 3,600,000 boxes, tangelos 900,000 boxes, for a grand total of 90,050,000. All above figures subject to correction.

Florida's combined volume of fresh citrus shipments were 3,152 cars over the previous season. All citrus shows slight increase as follows: Oranges 596 cars; grapefruit 1,360 cars; tangerines 1,196 cars. All comparison for oranges, grapefruit and tangerines include the estimated proportion of mixed cars (exclusive of all Florida consolidated l.o.l. express cars for both years). For the 1963-64 season the percentage of shipments that moved from the state by rail totaled 22.22 percent, by truck 77.78 percent.

General Comments Cont'd

Total number of cars Florida oranges & grapefruit sold at auction this season, approximately 20% less than 1962-63. Total cars sold 1963-64, oranges 1696, grapefruit 3050. In contrast to decrease in number of cars, price averages were slightly higher. Oranges 7.78 average, grapefruit 6.09 average per full box. Tangerines (straight) volume sold on Auction market slightly less than 1962-63 season. Number of cars sold 605, average price 4.31 per 4/5 box.

The number of boxes used by Florida Cannery in 1963-64 as compiled by Florida Cannery Association slightly less than 58,000,000 as compared to 80,000,000 for the 1962-63 season. Delivered cannery prices were much higher than last season with an average thru September 5th as follows: Oranges, concentrate \$5.27839; juice \$4.75820. Grapefruit juice \$2.05254; sections \$2.56829. Tangerine juice \$2.62002.

Shipments of fresh citrus unloads from Florida in 1963-64 totaled slightly over 59,000 cars for the 41 U. S. Cities and 5 Canadian Cities via rail & truck. Orange unloads from Florida totaled 10,962. New York City-Newark leading the way with approximately 50% of the grand total of rail while truck percentages are much less. Philadelphia was 2nd with a total number of 713 rail; 765 truck. Unloads of Florida Grapefruit in 41 Cities (rail & truck) totaled 15,444; again New York City-Newark receiving the greater part both rail & truck with Philadelphia 2nd with a grand total of 1,260 cars. Both tangerines & mixed citrus Florida was well represented. Grand total tangerines 2,806; Mixed Citrus 1,164.

The conversion factor of 500 boxes — used in converting truck shipments to carlots.

For detailed auction data for California citrus for 1963-64 season, write Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California.

WEATHER

CHARACTER OF THE 1963-64 SEASON

The 1963-64 winter season was long, wet and cold, beginning with frost in cold locations of the northern Districts on October 30 and 31st and ending with frost and freezing temperatures in northern and central districts on March 31st. Some scattered light frost occurred in the Gainesville district on April 1st and in isolated areas of the Everglades. Cool to cold weather prevailed for the four month period, November-February, with a reversal to warm weather beginning at the first of March. This warm period was interrupted with the damaging frost for truck crops on March 31st. Many rainy days resulted in much cloudy weather during the season to keep daytime temperatures much below the normal. The consistently cold season is shown by the occurrence of 63 cold nights (36° or below on the peninsula) which is only three below the record number of 66 in the 1939-40 season. All but five of these occurred during the four months, November thru February. In December a new record of 22 cold nights for the month was set since frost warning records were begun in 1935. Temperatures averaged below normal in all months November thru February and were much below normal in December and February. Temperatures averaged above normal in March.

The early and late season frosts, frequent frosts during the season, much above normal rainfall, and many cool cloudy days were very detrimental to truck crops, unprotected ornamentals and pastures. Crop growth was seriously retarded, quality and yield reduced and spring planting was delayed in northern, central and the Everglades districts.

Rainfall of near 25 inches in northern, near 20 inches in central, and 10-15 inches in southern districts gave one of the wettest seasons of record for most of the peninsula except the Lower East Coast. This was especially beneficial to tree crops since the season followed a long dry period which had been record breaking in length for some places in central sections. Soil moisture was more than adequate and water levels raised by persistent, and at times, heavy rains.

The season was especially beneficial for citrus. The early season cold weather induced dormancy and cold temperatures kept the trees dormant until late in February. The sudden change to warm weather in March brought an extraordinarily heavy bloom and set a very good crop of fruit. Grove heating was done only on six nights in the Gainesville district and three nights in central districts.

April temperatures averaged above normal. Generally a rather warm month except for the first two days. Scattered frost occurred on April 1st at isolated low ground locations in northern and central areas and a few places in the colder backlands of the Everglades. Rainfall was one to three inches below normal in the citrus areas.

May temperatures were near to slightly below normal and rainfall was one-half to one and one-half inches below normal.

June was hot and dry in the citrus areas with rainfall deficiency ranging from one and one-half to as much as seven inches in the citrus areas.

July experienced near normal temperatures and some increased in precipitation. Some stations reported below normal rainfall while a few locations had rainfall above normal.

August recorded ample rainfall in most all areas and temperatures averaged near normal.

MARKET NEWS SERVICE ON FRUITS & VEGETABLES

MARKETING FLORIDA CITRUS
SUMMARY OF 1964-65 SEASON

P R E F A C E

The Federal-State Market News Service a co-operative agency of the U. S. Department of Agriculture and the Florida Department of Agriculture, submits this annual summary for the 1964-65 season.

The daily citrus reports were issued at Lakeland, Florida from various reports released by the U. S. Department of Agriculture, Washington, D. C.; Florida Crop & Livestock Reporting Service; the Citrus Inspection Division, Florida Department of Agriculture; the Federal-State Frost Warning Service; the Florida Citrus Commission; Florida Citrus Exchange; Florida Citrus Mutual; Florida Citrus Marketing Agreement Committee; Florida Cannery Association; Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

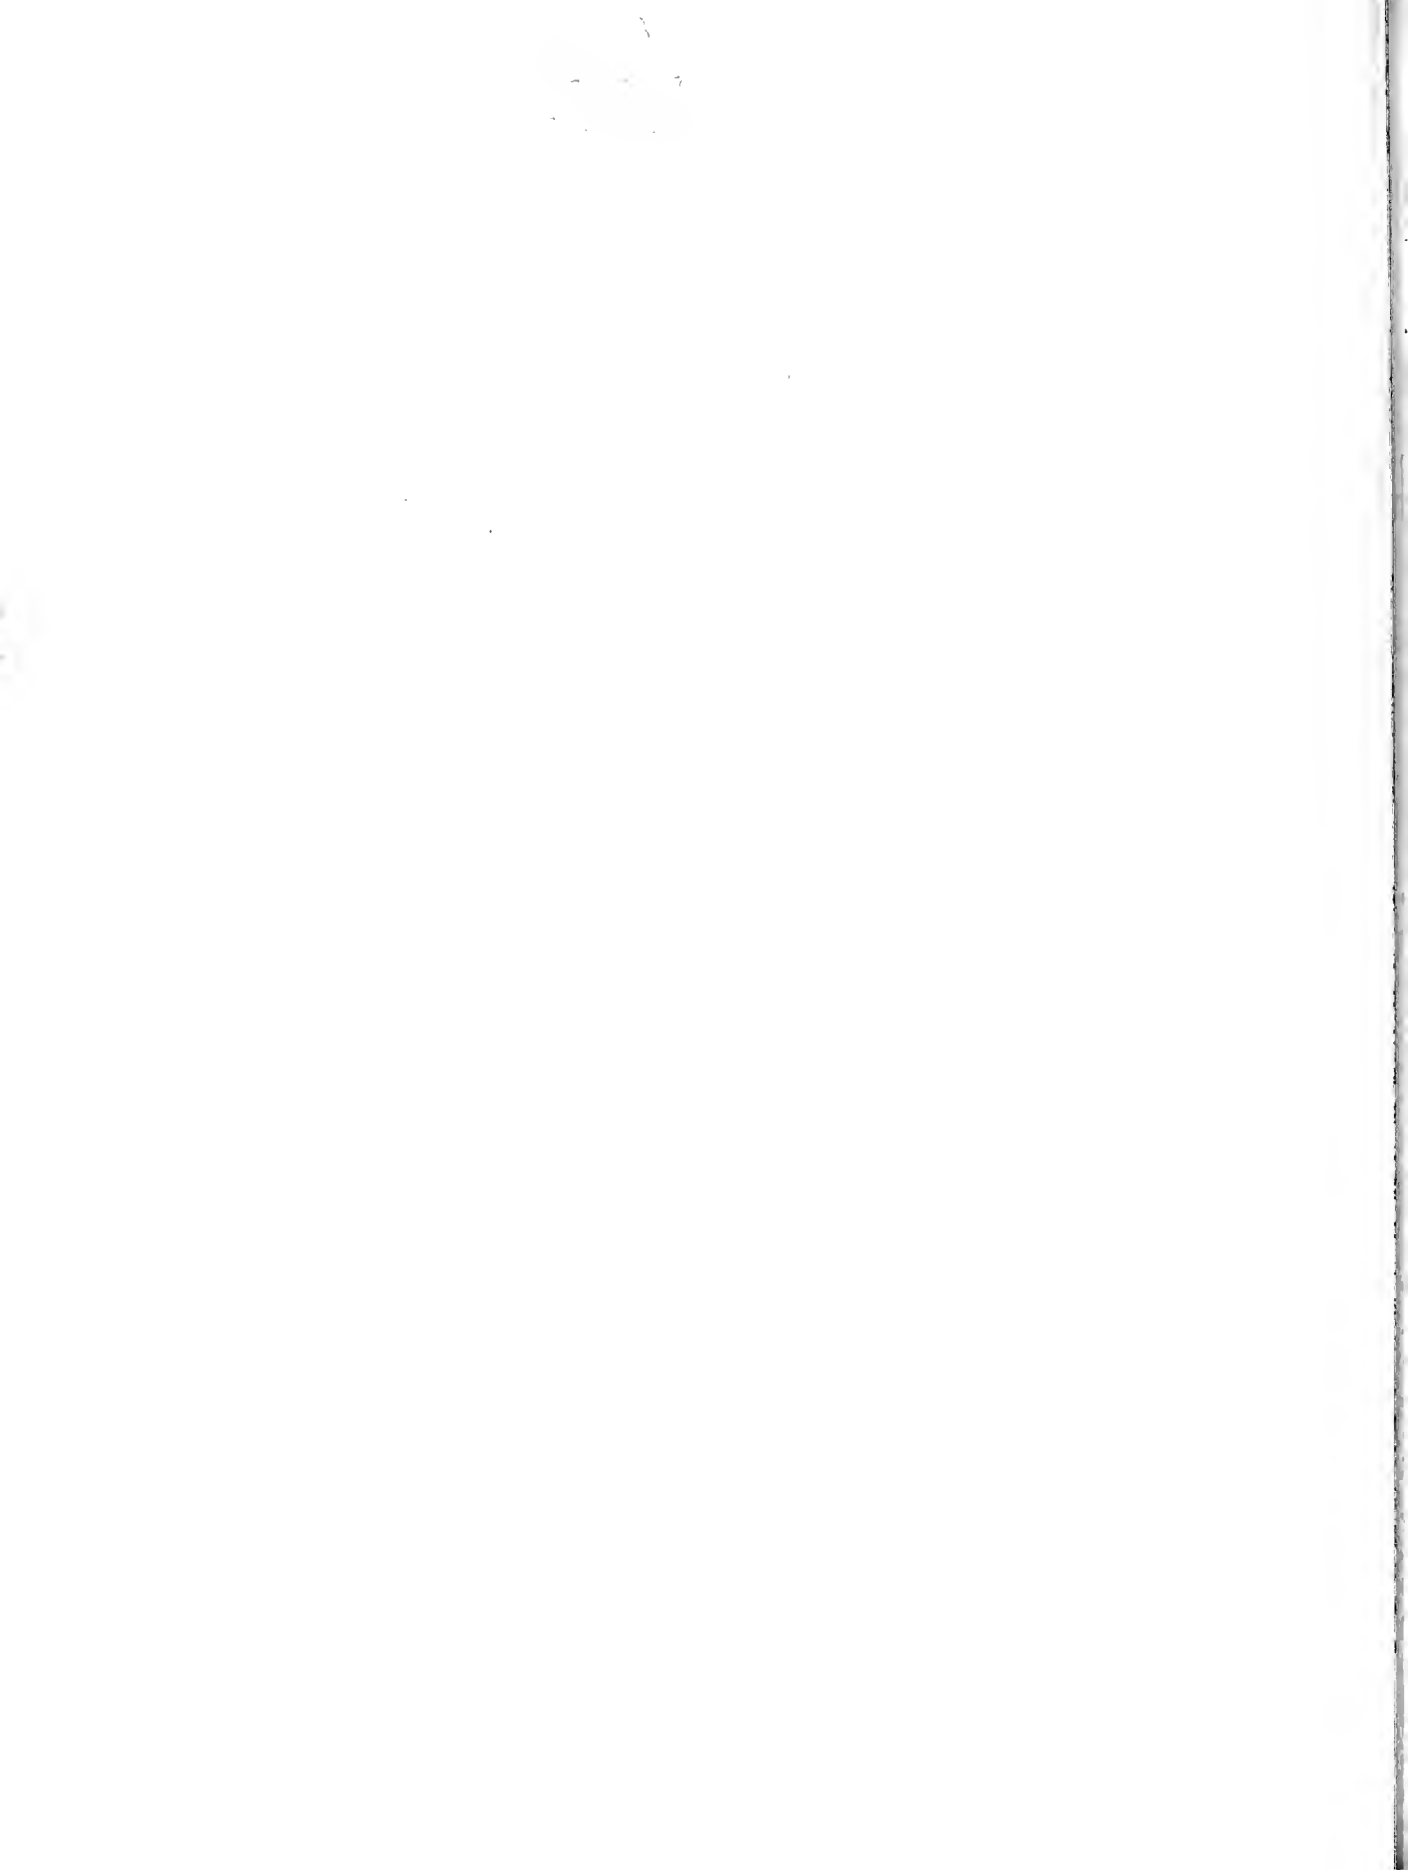

Late and corrected reports which are not yet available may cause revision of shipments, unloads and other similar data, for the 1964-65 season. Every effort has been made to include data in this summary which will be of most value to the Citrus Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

We are deeply grateful to the Citrus Industry and related agencies for their fine cooperation in making this summary possible.

Additional copies of this summary may be obtained upon request to Federal-State Market News Service, P. O. Box 69, Lakeland, Florida.

Released:
September 1965

L. B. Morgan,
Local Representative

MARKET NEWS SERVICE ON FRUITS AND VEGETABLES

MARKETING FLORIDA CITRUS
SUMMARY OF 1964-65 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 5, 1964 to June 1, 1965 inclusive

GENERAL COMMENTS

The 1964-65 citrus harvesting season got off to a shaky start following Hurricane Cleo on August 26 and 27th of 1964. The hardest area hit was the Indian River District, predominately Grapefruit. Losses varied widely from grove to grove. This unfortunate act of nature caused the quality of larger size fruit for early fall shipments to be reduced. Oranges and specialty fruit loss was much lighter; the greater losses were generally in the larger size fruit. Except for Cleo, it was a normal harvesting season, although along in January there was a little scare by cold weather. Most of the industry, remembering the freeze of 1962, took extra precautions; therefore, only light damage was reported from the low temperatures of January 16-18th, 1965.

Florida Citrus groves have recovered rapidly and are near pre-freeze level. It is estimated that 35,080,000 trees or about 65% of the total population were bearing at the time of the most recent survey. This is only slightly less than the number of bearing trees reported in 1962. The increase in bearing trees during the past year reflects the many freeze-damaged groves that have come back into production as well as added new groves that have come into bearing.

There were 54,310,000 commercial citrus trees at the beginning of the 1964-65 season, an increase of over 6 3/4 million trees or about 14% over the 47,520,000 trees reported in the 1963 survey. This is a record large number of citrus trees for the state exceeding the previous high of over 51,000,000 trees in commercial groves reported in 1962. With this increased number of citrus trees in the state, only about 35% of trees are non-bearing. This is an increase of about 7% since the last survey. The greater increase percentage-wise, is on the East Coast. This increase reflects the numerous large individual plantings being made on reclaimed acreage. The biggest increase in major types was in early oranges. Early varieties have been popular in the cold damaged areas. The population of Grapefruit increase is about 8%, but tree numbers have not returned to pre-freeze level.

General Comments Cont'd

Preliminary production figures on citrus for the United States released by Statistical Reporting Service of the U. S. Department of Agriculture, for crop year 1964-65, amounted to approximately 180 million boxes; this is an increase of some 27 million boxes compared with the 1963-64 crop. Orange production approximately 121 million boxes, up about 29 million boxes. Grapefruit up slightly to the highest figure since the 1961-62 freeze, approximately 40 million boxes. Lemons 14,600,000 boxes; Tangerines 3,900,000 boxes; Limes 640,000 boxes. Florida breakdown on citrus fruits as follows: Oranges (including Temples & Tangelos) 90,900,000 boxes; Grapefruit 31,800,000 boxes; Tangerines 3,900,000 boxes; for a grand total of 126,600,000 boxes or approximately 29% higher than 1963-64 crop. All above figures subject to correction.

Florida's total volume of fresh citrus shipments were 55,925 carlot and carlot equivalents for 1964-65 season. All citrus shows slight increase as follows: Oranges 6,610 cars; Grapefruit 1,629 cars; Tangerines 243 cars. All comparison for Oranges, Grapefruit and Tangerines include the estimated proportion of 'mixed cars' (exclusive of all Florida consolidated l.c.l. express cars for both years). For the 1964-65 season the percentage of shipments that moved from the state by rail totaled 27.2 percent, by truck 72.8 percent.

Florida oranges and grapefruit sold at auction this season totaled 35 cars less than 1963-64. Total cars sold 1964-65, oranges 1,767, grapefruit 2,955. Price averages were slightly lower than previous season. Oranges \$3.09 average, Grapefruit \$2.97 average per 4/5 bushel container. Tangerines (straight) volume sold on auction market in 1964-65 were 191 cars over total volume 1963-64. Number of cars sold 1,001, average price \$3.73 per 4/5 bushel container.

The number of boxes, all citrus, used by Florida Processors in 1964-65 as compiled by Florida Cannery Association was 86,114,436 as compared to approximately 58,000,000 for the 1963-64 season. Delivered cannery prices 1964-65 season were much lower than last season with an average through August 28th as follows: Oranges, concentrate \$3.37; juice \$2.92. Grapefruit juice \$1.32; sections \$1.80. Tangerine juice \$1.82.

Shipments of fresh citrus unloads from Florida in 1964-65 totaled 38,689 cars for the 41 U. S. Cities and 5 Canadian Cities via rail & truck. Orange unloads from Florida totaled 15,473. New York City-Newark leading the way with rail 2,217, truck 1,593; with a grand total of 3,810. Philadelphia was second with a total number of 968 rail and 897 truck. Unloads of Florida Grapefruit in 41 Cities (rail & truck) totaled 15,561 (excluding 5 Canadian Cities which totaled 2,214 cars). Again, New York City-Newark receiving the greater part both rail & truck with Philadelphia second with a grand total of 1,326 cars and Chicago close behind with 1,300 cars. Both Tangerines and Mixed Citrus from Florida were well represented. Grand total Tangerines 3,077; Mixed Citrus 1,364.

The conversion factor of 500 boxes - used in converting truck shipments to carlots.

For detailed auction data for California citrus for 1964-65 season, write Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California.

WEATHER

CHARACTER OF THE 1964-65 SEASON

The 1964-65 season was mild. Temperatures were predominately normal or above with only a few periods when they were adverse for agricultural production. The total of thirty-three cold nights (36° or lower on the peninsula) was much less than the average. The most detrimental of these were: January 17-19, February 1, February 25-28 and March 9. A brief pre-season cool spell October 22 resulted in temperatures in the middle 30's with patchy frost over northern districts and some high 30's with patchy frost in the colder locations of central districts.

Advection of Arctic air January 16 ushered in the coldest period of the season for most areas. Spotty light frost was observed only in northern districts on the morning of the 17th due to windy conditions throughout the night. Long durations of below freezing temperatures and heavy frost occurred in most areas on the night of January 17-18. Damage to tender vegetable crops was severe and it was extensive to hardy crops and sugar cane. Unprotected citrus in the colder locations suffered considerable defoliation, some frozen fruit and minor wood damage. Frost and freezing temperatures covered much of the northern and the colder locations of central districts on the morning of January 29. Durations below freezing were quite long in low ground and pockets with spotty damage to citrus in colder central Florida locations.

There was some damage to crops from high winds on February 25 as a cold air mass moved into the state. Frost and freezing temperatures February 26-28 damaged vegetables and flowers and caused droppage of a small amount of citrus fruit.

March 5-10 was a rather cold period when frost and/or freezing temperatures were confined only to the northern districts except for the morning of the 9th when scattered light to moderate frost occurred over most of the peninsula. Some minor damage to tender truck and watermelons was caused from the cold and wind.

Hurricane Isbell caused excessive rainfall October 10-11 in the Lower East Coast district which resulted in some crop losses, and Hurricane Dora caused Flooding of fields in the extreme north in September. The latter was further aggravated by locally heavy rains in November. Precipitation during the season, November through March, was generally sufficient to keep soil moisture adequate after November, but dry conditions existed in many of the agricultural areas in October and November and over the southwest portion of the peninsula all season. Rainfall was deficient in most areas in April and May while generous rains occurred in June, July and August.

FLORIDA CITRUS MARKETING

SUMMARY OF 1965-66 SEASON

Federal-State Market News Service

*United States Department Of Agriculture
Consumer & Marketing Service*

COOPERATING WITH

*Florida Department Of Agriculture
Division Of Marketing*

P R E F A C E

The Federal-State Market News Service a co-operative agency of the U. S. Department of Agriculture and the Florida Department of Agriculture, submits this annual summary for the 1965-66 season.

The daily citrus reports were issued at Lakeland, Florida from various reports released by the U. S. Department of Agriculture, Washington, D. C.; Florida Crop & Livestock Reporting Service; the Citrus Inspection Division, Florida Department of Agriculture, the Federal-State Frost Warning Service; the Florida Citrus Commission; Florida Citrus Exchange; Florida Citrus Mutual; Florida Citrus Marketing Agreement Committee; Florida Cannery Association; Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Late and corrected reports which are not yet available may cause revision of shipments, unloads and other similar data, for the 1965-66 season. Every effort has been made to include data in this summary which will be of most value to the Citrus Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

We are deeply grateful to the Citrus Industry and related agencies for their fine cooperation in making this summary possible.

Additional copies of this summary may be obtained upon request to Federal-State Market News Service, P. O. Box 69, Lakeland, Florida.

Released:
October 1966

MARKETING FLORIDA CITRUS
SUMMARY OF 1965-66 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from September 30, 1965 to June 1, 1966 inclusive

GENERAL COMMENTS

Harvesting of Florida's near record citrus crop got off to a good start in September. Generally it was a good season with few exceptions. The most predominant of the unseasonable weather conditions was the below freezing temperature on the morning of January 31, and near freezing temperature on the morning's of February 5th and 6th, 1966 which extended over all agricultural areas of peninsular Florida. Citrus was damaged to a degree in groves that were unprotected in most all sections of Florida. Tornadoes moving eastward across the state on April 4th caused some damage. At least three tornadoes were reported on that date. Damage to citrus trees was locally severe in north Polk County but damage statewide was minor. Except for the above mentioned problems, weather was generally ideal throughout the 1965-66 season.

As a result of the cold weather in late January an embargo was placed on citrus fruits by the Florida Citrus Commission. The Commission adopted emergency regulations 105-0.02 as follows: Therefore be it resolved that: for a period of five days beginning at 11:00 P.M. Friday, February 4, 1966, and ending at 7:00 A.M. Thursday, February 10, 1966. No citrus fruit in the state of Florida shall be sold or offered for sale, transported for any purpose whatsoever, other than diversions from all channels of human consumption, prepared, received, or delivered for transportation or market, except at canning plants for the purpose of processing. The embargo is the first since the crippling freeze of December 1962.

Groves throughout Florida have shown a remarkable comeback since the freeze of 1962. It is estimated that the crop year 1966-67 volume wise will be one of the largest on record. An estimate of bearing trees at the beginning of the 1965-66 season, round oranges 51,850,000; grapefruit 6,830,000. This is an increase of approximately 10 million trees as compared to 1964-65 season and a substantial increase of about 22 million trees as compared with 1957.

Of the non-bearing trees totaling 25,110,000, an increase of 9,880,000 between the 1964 and 1965 survey is due primarily to unusually active plantings during the 12 months period that elapsed. About one-third of those new trees were interset and reset in old groves, and two-thirds are in solid new blocks.

Continued next page

General Comments Cont'd

Statistical Reporting Service of the U. S. Department of Agriculture, preliminary production figures on citrus for the United States for crop year 1965-66, amounted to approximately 207½ million boxes; this is an increase of some 27½ million boxes compared with the 1964-65 crop. Orange production approximately 140 million boxes, up about 18½ million boxes. Grapefruit up slightly to the highest figure since 1961-62, approximately 46 million boxes. Lemons 16,450,000 boxes; Tangerines show a slight decline totaling approximately 3,600,000 boxes, as compared to 3,900,000 the previous season; Limes 415,000 boxes. Florida breakdown on citrus fruits as follows: Oranges (including Temples and Tangelos) 101,200,000 boxes; Grapefruit 34,800,000 boxes; Tangerines 3,600,000 boxes; Limes 415,000 boxes; for a grand total of 140,015,000 boxes or approximately 18% higher than 1964-65 crop. All above figures subject to correction.

Florida's total volume of fresh citrus shipments were 57,511 carlot and carlot equivalents for 1965-66 season. All citrus shows slight increase except Grapefruit which shows a decline; Oranges 2,607 cars increase; Grapefruit 1,306 Cars decline; Tangerines 285 cars increase. All comparison for Oranges, Grapefruit and Tangerines include the estimated proportion of 'mixed cars' (exclusive of all Florida consolidated l.c.l. express cars for both years). For the 1965-66 season the percentage of shipments that moved from the state by rail totaled 33.5 percent, by truck 66.5 percent.

Florida oranges and grapefruit sold at auction this season totaled 6 cars less than 1964-65. Total cars sold 1965-66, oranges 1,770, grapefruit 2,528. Price averages were slightly lower than previous season. Oranges \$2.80 average, Grapefruit \$2.91 average per 4/5 bushel container. Tangerines (straight) volume sold on auction market in 1965-66 were 17 cars over total volume 1964-65. Number of cars sold 1,018, average price \$3.60 per 4/5 bushel container.

The number of boxes, all citrus, used by Florida Processors in 1965-66 as compiled by Florida Cannery Association was 103,496,117 as compared to approximately 86,114,436 for the 1964-65 season. Delivered cannery prices 1965-66 season were much lower than last season on most citrus; grapefruit, an exception, was slightly higher with an average through August 27th as follows: Oranges, concentrate \$2.28; juice \$1.65. Grapefruit juice \$1.58; sections \$1.77. Tangerine juice \$.88.

Shipments of fresh citrus unloads from Florida in 1965-66 totaled 38,811 cars for the 41 U. S. Cities and 5 Canadian Cities via rail & truck. Orange unloads from Florida totaled 16,004. New York City-Newark leading the way with rail 3,212, truck 1,433; with a grand total of 3,645. Philadelphia was second with a total number of 1,303 rail and 845 truck. Unloads of Florida Grapefruit in 41 Cities (rail & truck) totaled 17,565. Again, New York City-Newark receiving the greater part both rail & truck totaling 3,860 with Philadelphia second with a grand total of 1,300 cars and Chicago close behind with 1,221 cars. Both Tangerines and Mixed Citrus from Florida were well represented. Grand total Tangerines 4,502; Mixed Citrus 2,570.

The conversion factor of 500 boxes - used in converting truck shipments to carlots.

For detailed auction data for California citrus for 1965-66 season, write Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California 90021

WEATHER

CHARACTER OF THE 1965-66 SEASON

November was generally warm with good growing conditions over most areas. Cold to cool periods occurred during the first ten days of December, December 20-23, and on quite a number of days in January, leading up to the major cold period. The coldest period of the 1965-66 winter season was from the latter part of January through the first few days of February. The coldest were the mornings of January 31, February 5 and 6 when frost and/or freezing temperatures extended over all agricultural areas of peninsular Florida. Damage to unprotected vegetables, ornamentals, and pastures was rather extensive. Citrus fruit was damaged to a varying degree in unprotected groves in most all areas. Almost all remaining early and mid-season fruit was salvaged. Valencia oranges were showing some drying and a slight increase in droppage towards the end of the season.

Wood and twig damage to citrus was surprisingly light considering temperatures and durations of critical temperatures. By mid and late March, most groves had put on flush growth and rather heavy bloom.

It was cool to cold the latter part of February and into the first ten days of March and again towards the end of March. Very little freeze or frost damage occurred to crops during this period. The continued cool to cold nights retarded plant growth.

Rainfall for the season for all areas was above normal, bringing the water table to near normal values. Extremely heavy rainfall in October in southern areas caused flooding of some crops. Some stations in the Fort Lauderdale area reported over 40 inches in October, half of which fell in 24-36 hours. November rainfall was generally below normal, while December was near to slightly above normal. January and February rainfall was well above normal while March rainfall was below normal except above normal in the Lower East Coast areas where some flooding occurred.

April was generally dry and cool except for warm weather during the last week of the month.

Tornadoes, at least three, moved eastward from the Tampa Bay area to the East Coast near Cocoa on April 4. The greatest damage occurred in the Gibsonia area north of Lakeland where two tornadoes passed. Considerable damage also occurred in the northern section of Tampa. The third tornado dipped to near the ground briefly in south Lakeland, Auburndale and Haines City with considerable spotty damage. Damage to citrus trees was locally severe in northern Polk County but statewide damage to citrus was minor.

May and June rainfall was above normal in all areas except below normal in May along the West Coast - Tampa Bay southward. July rainfall spotted. Ranged from about three inches below normal to near normal.

FLORIDA CITRUS MARKETING

SUMMARY OF 1966-67 SEASON

Federal-State Market News Service

*United States Department Of Agriculture
Consumer & Marketing Service*

COOPERATING WITH

*Florida Department Of Agriculture
Division Of Marketing*

P R E F A C E

The Federal-State Market News Service, a co-operative agency of the U. S. Department of Agriculture and the Florida Department of Agriculture, submits this annual summary for the 1966-67 season.

The daily citrus reports were issued at Lakeland, Florida from various reports released by the U. S. Department of Agriculture, Washington, D. C.; Florida Crop & Livestock Reporting Service; the Citrus Inspection Division, Florida Department of Agriculture, the Federal-State Frost Warning Service; the Florida Citrus Commission; Florida Citrus Exchange; Florida Citrus Mutual; Florida Citrus Marketing Agreement Committee; Florida Cannery Association; Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Late and corrected reports which are not yet available may cause revision of shipments, unloads and other similar data, for the 1966-67 season. Every effort has been made to include data in this summary which will be of most value to the Citrus Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

We are deeply grateful to the Citrus Industry and related agencies for their fine cooperation in making this summary possible.

Additional copies of this summary may be obtained upon request to Federal-State Market News Service, P. O. Box 69, Lakeland, Florida 33802.

Released:
October 1967

MARKETING FLORIDA CITRUS
SUMMARY OF 1966-67 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from September 30, 1966 to June 5, 1967, inclusive

GENERAL COMMENTS

Citrus crop in Florida breaks all time record. The 1966-67 Season recorded a harvest of approximately 196 million boxes. This crop exceeded the second largest crop on record, 1961-62 Season, which produced approximately 153 million boxes.

The Florida weather was generally good for citrus throughout the 1966-67 Season. Hurricane Inez (in October), did little or no appreciable damage. Temperatures were moderate most of the season, ranging slightly below normal in periods of November, December and January. Extreme dry weather prevailed during March, April and May causing some damage, mostly to young trees.

Florida commercial citrus increase has been phenomenal. The current citrus tree survey reveals that there were 66,441,000 trees, an increase of 53 per cent from 43,885,000 trees in 1956.

Of the 603,060 acres that were in citrus in 1956, only 449,380 acres are still commercial, a reduction of 25 per cent. Freezes and urban encroachment account for most of the reduction.

A recent survey reveals that 48 per cent of Florida's citrus has been set since 1956. A record, 82,081 acres, was set during 1965. One of every ten acres of commercial trees in the state was set during the calendar year 1965.

Eighty-one per cent of all acreage in citrus is in Oranges as compared with 72 per cent in 1956. There has been a 5 per cent decline in total Grapefruit trees since 1956. Reduction of Seedy variety trees amounted to 29 per cent; Pink Seedless varieties showed a substantial gain during the same period.

Specialty fruits show an increase in plantings for the past few years. Renewed interest in Tangerines and Murcotts accounted for much of the increased acreage.

The Interior Regulated District has 85 per cent of Florida's citrus. Indian River Regulated District has 15 per cent of the State's acreage. Recently, heavy plantings have not materially affected the distribution of total acreage between the two regulated districts.

General Comments Cont'd

Statistical Reporting Service of the U. S. Department of Agriculture, preliminary production figures on citrus for the United States for crop year 1966-67, amounted to approximately 272 million boxes; this is an increase of some 65 million boxes compared with the 1965-66 crop. Orange production approximately 189 million boxes, up about 49 million boxes. Grapefruit showed a substantial increase, approximately 56 million boxes as compared with 46 million boxes in 1965-66. Lemons 18,750,000 boxes; Tangerines show a sharp increase compared with the previous season, 1966-67 approximately 5,600,000. Tangelos 1,800,000 boxes; Limes 420,000 boxes. Florida breakdown on citrus fruits as follows: Oranges (including Temples) 144,500,000 boxes; Grapefruit 43,600,000 boxes; Tangerines 5,600,000 boxes; Tangelos 1,800,000 boxes; Murcotts 675,000 boxes; Limes 420,000 boxes; for a grand total of 196,595,000 boxes, approximately 27½ per cent higher than 1965-66 crop. All above figures subject to Correction.

Florida's total volume of fresh citrus shipments were 68,642 carlot and carlot equivalents for 1966-67 season. All citrus shows an increase; Oranges 5,510 cars; Grapefruit 4,930 cars; Tangerines 685 cars.

All comparison for Oranges, Grapefruit and Tangerines include the estimated proportion of 'mixed cars' (exclusive of all Florida consolidated l.c.l. express cars for both years). For the 1966-67 season the percentage of shipments that moved from the state by rail totaled 31 per cent, by truck 69 per cent.

Florida Oranges and Grapefruit sold at auction this season totaled 763 cars more than 1965-66. Total cars sold 1966-67, Oranges 1,938; Grapefruit 3,123. Price averages were slightly lower than previous season. Oranges (excluding Temples) \$2.28 average; Temples \$2.46 average; Grapefruit \$2.37 average per 4/5 bushel container. Tangerines (straight) volume sold on auction market in 1966-67 was 147 cars over total volume 1965-66. Number of cars sold 1,165 average price \$3.07 per 4/5 bushel container.

The number of boxes, all citrus, used by Florida Processors in 1966-67 as compiled by Florida Cannery Association was 151,488,866 as compared to approximately 103,496,117 for the 1965-66 season. Delivered cannery prices 1966-67 season were much lower than last season on all citrus with an average through August 26th as follows: Oranges, concentrate \$1.29; Juice \$1.09; Grapefruit juice \$.81; Sections \$1.21.

Shipments of fresh citrus unloads from Florida in 1966-67 totaled 43,256 cars for the 41 U. S. Cities and 5 Canadian Cities via rail & truck. Orange unloads from Florida totaled 18,181. New York City-Newark leading the way with rail 2,801, truck 1,598, with a grand total of 4,399. Philadelphia was second with a total number of 1,058 rail and 1,064 truck. Unloads of Florida Grapefruit in 41 Cities (rail and truck) totaled 18,894. Again, New York City-Newark receiving the greater part both rail and truck totaling 5,073 with Philadelphia second with a grand total of 1,705 cars and Chicago third with 1,424 cars. Both Tangerines and Mixed Citrus from Florida were well represented. Grand total Tangerines 3,413; Mixed Citrus 2,768.

The conversion factor of 500 boxes - used in converting truck shipments to carlots.

For detailed auction data for California citrus for 1966-67 season, write Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California 90021

WEATHER

CHARACTER OF THE 1966-67 SEASON

Hurricane Inez caused damage to agricultural production on the Lower East Coast and minor damage in the Everglades early in October. Most damage resulted from salt accumulation which was heaviest in Dade County. Excessive rainfall on the Lower East Coast during the period October 21-24 resulted in heavy damage, confined primarily to vegetables.

The 1966-67 season was generally cool and dry. Temperatures averaged a little below normal in November, December, and February and a little above normal in January and March. The coldest and most detrimental periods were November 4, November 29 - December 2, December 15, December 25-26, January 5-6, January 29-31, and February 26-27.

Record minimum temperatures for so early in the season occurred on the morning of November 4 in parts of central Florida and the Everglades. Frost extended to the Everglades but damage to truck crops was minor and there was no damage to citrus. The results of the second and third cold spells were similar. Damage was moderate to truck crops on Christmas morning and there was minor damage to foliage on citrus. The coldest period in January occurred on the 29th and 30th. Damage to young citrus in south central districts was locally heavy but elsewhere it was minor. Damage to tender truck was light to moderate.

The cold period of February 26-27 caused spotty heavy damage to citrus in northern and north portion of central districts. Damage to truck crops and peaches was severe in northern districts and moderate to locally heavy to tender truck in central and Everglades districts. The warming trend that followed continued through March.

Drought conditions prevailed over much of north and central Florida and parts of south Florida throughout the season, except for February when generous rains occurred.

Rainfall was below normal for March, April and May and drought conditions became rather severe.

June had an abundance of rainfall in most areas, however, spotty locations in west central sections reported below normal amounts although some stations reported as much as 7 inches above normal.

July rainfall was spotty, ranging from slightly below to slightly above normal. Generally citrus and other crops were in good to excellent condition during the summer.

P R E F A C E

The Federal-State Market News Service, a co-operative agency of the U. S. Department of Agriculture and the Florida Department of Agriculture, submits this annual summary for the 1967-68 season.

The daily citrus reports were issued at Lakeland, Florida from various reports released by the U. S. Department of Agriculture, Washington, D. C.; Florida Crop & Livestock Reporting Service; the Citrus Inspection Division, Florida Department of Agriculture, the Federal-State Frost Warning Service; the Florida Citrus Commission; Florida Citrus Exchange; Florida Citrus Mutual; Florida Citrus Marketing Agreement Committee; Florida Cannery Association; Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Late and corrected reports which are not yet available may cause revision of shipments, unloads and other similar data, for the 1967-68 season. Every effort has been made to include data in this summary which will be of most value to the Citrus Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

We are deeply grateful to the Citrus Industry and related agencies for their fine cooperation in making this summary possible.

Additional copies of this summary may be obtained upon request to Federal-State Market News Service, P. O. Box 69, Lakeland, Florida 33802.

MARKET NEWS SERVICE ON FRUITS AND VEGETABLES

MARKETING FLORIDA CITRUS
SUMMARY OF 1967-68 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 2, 1967 to June 7, 1968, inclusive

GENERAL COMMENTS

Harvesting of Florida's 1967-68 citrus crop got underway about mid September, but no significant volume was picked before October. Weather conditions were generally good throughout the growing and harvesting season with few exceptions. The quality of all citrus was generally good in most sections. Citrus fruit supplies in the 1967-68 Season were sharply below the burdensome quantities available for marketing in 1966-67 Season.

Florida citrus acreage increases. In December 1967, there were 931,249 acres of citrus in Florida according to the Florida Crop and Livestock Reporting Service. This is a net increase of 8.5 per cent since December 1965. There were 51,181 acres set in 1966 and 35,896 acres in 1967; down sharply from the record, 80,258 acres set in 1965. The acreage set in 1967 was the smallest since 1959. Indian River, St. Lucie, Martin, and Palm Beach Counties accounted for 54 per cent of the acreage set in 1966 and 1967.

In northern fringe areas, some increase in older acreage may be noted where neglected groves have been reclaimed, following ideal growing conditions and recent favorable prices.

A review of acres by years set from the most recent citrus census reveals the young average age of Florida citrus groves. Currently 51.5 per cent of all acreage is ten years or less in age. Distribution of acres by years set, also shows that nearly one-fourth of the state's total acreage was non-bearing in the 1967-68 crop year.

The total number of citrus trees at the end of 1967 was: non-bearing 21,501,000; bearing 74,442,000; Total all Florida citrus trees 95,943,000; of this total, Oranges accounted for 74 per cent; Grapefruit 12 per cent and Specialty Fruit 14 per cent.

General Comments Cont'd

Preliminary production figures on citrus for the United States released by statistical Reporting Service of the U.S. Department of Agriculture for crop year 1967-68, amounted to approximately 195 million boxes; this is a substantial decrease of some 77 million boxes compared with the 1966-67 crop. Orange production approximately 129 million boxes, down about 60 million boxes. Grapefruit showed a decrease, approximately 43 million boxes as compared with 56 million boxes in 1966-67. Lemons 16,750,000 boxes; Tangerines show a sharp decrease compared with the previous season; 1967-68 approximately 3,650,000. Tangelos 1,700,000 boxes; Limes 750,000 boxes. Florida breakdown on citrus fruits as follows: Oranges (including Temples) 104,000,000 boxes; Grapefruit 32,800,000 boxes; Tangerines 2,800,000 boxes; Tangelos 1,700,000 boxes; Limes 750,000 boxes; for a grand total of 142,050,000 boxes, approximately 28 per cent lower than 1966-67 crop. All above figures subject to correction.

Florida's total volume of fresh citrus shipments carlot and carlot equivalents for 1967-68 Season 60,891 as compared to 68,642 last season. Breakdown for 1967-68 Season as follows: Oranges 31,714; Grapefruit 25,506; Tangerines 3,671.

All comparison for Oranges, Grapefruit and Tangerines include the estimated proportion of 'mixed cars' (exclusive of all Florida consolidated l.c.l. express cars for both years). For the 1967-68 Season the percentage of shipments that moved from the state by rail totaled 28.5 per cent, by truck 71.5 per cent.

Florida Oranges and Grapefruit sold at auction this season totaled 898 cars less than 1966-67. Total cars sold 1967-68: Oranges 1,336; Temples 519; Grapefruit 2,237; Prices averaged higher than previous season. Oranges (excluding Temples) \$3.30 average; Temples \$3.48 average; Grapefruit \$3.24 average per 4/5 bushel container. Tangerines volume sold on auction market in 1967-68 was 326 cars under the total volume in 1966-67. Total number of cars sold 639; average price \$4.74 per 4/5 bushel container (includes: Tangerines, straight 528 cars, average price \$5.19; Tangelos 180 cars, average price \$3.65; Murcotts 127 cars, average price \$4.55; Satsumas 3 cars, average price 3.56; Ponkans 1 car, average price 2.50).

The number of boxes, all citrus, used by Florida Processors in 1967-68 as compiled by Florida Cannery Association was 104,215,526 as compared to approximately 151,488,866 for the 1966-67 Season. Delivered cannery prices 1967-68 season were much higher than last season on all citrus with an average through August 31st as follows: Oranges, Concentrate \$2.76, Juice \$2.41; Grapefruit Juice \$1.82, Sections \$2.32.

Shipments of fresh citrus unloads from Florida in 1967-68 totaled 43,350 cars for the 41 U.S. Cities and 5 Canadian Cities via rail & truck. Orange unloads from Florida totaled 19,837; New York City-Newark leading the way with rail 2,864, truck 2,160, total 5,024. Philadelphia was second with a total number of 1,051 rail and 1,107 truck. Unloads of Florida Grapefruit in 41 Cities (rail and truck) totaled 18,539; New York City-Newark receiving the greater part both rail and truck totaling 4,273 with Philadelphia second with a grand total of 1,463 cars and Chicago third with 1,143 cars. Both Tangerines and Mixed Citrus from Florida were well represented. Grand total Florida Tangerines 2,662; Mixed Citrus 2,312.

The conversion factor of 500 1 3/5 bushel boxes or 1,000 4/5 bushel containers was used in converting truck and boat shipments to carlots.

For detailed auction data for California citrus for 1967-68 Season, write Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California 90021

WEATHER

CHARACTER OF THE 1967-68 SEASON

Weather adversely affected agricultural production during the 1967-68 season. The season began and ended with a deficit of rainfall. Temporary relief to the drought conditions was provided by near normal rainfall during December and February. Rainfall amounts during November, January, and March were generally below normal. Temperatures were mild from November to mid January and cold from mid-January through March. While no major freeze occurred, crop growth was substantially retarded by sustained cold temperatures from mid January through March. Several occurrences of strong winds during February and March were detrimental to crops throughout the peninsula.

November was mild. Cool temperatures were experienced from the 5th through the 10th, and on the 19th and 20th. Only the interior of the northern districts reported scattered frost with minimums ranging from the low thirties to the low forties. Rainfall for the month was below normal in all areas except the Lower East Coast where amounts ranged from one to three inches.

December continued mild. The mornings of the 4th, 23rd through the 25th, 27th, and the 30th were cold. The most detrimental of these mornings was the 24th when minimum temperatures in the mid-twenties to low thirties were observed in the Suwannee and Gainesville districts. Upper twenties to low thirties were reported in the Orlando and Brooksville districts, while low to upper thirties occurred in the remainder of the central districts. Minimum temperatures in the forties were experienced in the southern districts. Scattered light to moderate frost was reported on the morning of the 24th in north and central districts. There were no frost occurrences in the southern districts thus far this season. Drought relieving rains occurred during the month with amounts from near eight inches in the extreme north to near three inches central to near two inches southern districts.

January was mild through the 11th, but the trend for the remainder of the month was cold. The first peninsula-wide frost occurred on the 26th when moderate to locally heavy frost with minimum temperatures ranging from the mid-twenties to low thirties northern districts to the low to mid-thirties southern districts. Rainfall was generally below normal.

February was cold. Cold mornings were reported on 20 of the 29 days. Moderate to locally heavy frost was reported in all agricultural areas of the peninsula except the Lower East Coast where frost was light on the 9th and 28th. Minimum temperatures on these dates ranged from the mid-twenties to low thirties northern districts to low to upper thirties southern districts. Minima on the remaining cold mornings in February were generally higher with frost intensity less. Beneficial rainfall during the month averaged one and one-half to two and one-half inches over the peninsula. Several occurrences of strong winds over the peninsula adversely affected agriculture, especially vegetable crops.

March continued cold. Eleven cold nights occurred during the month. The last peninsula-wide frost occurred on the morning of the 2nd, with the lowest of the season in the southern districts. Minima ranged from the mid-twenties to low thirties over the southern districts while upper twenties and low thirties prevailed in the north and central districts. Moderate to locally heavy frost was observed over the southern districts with light to moderate frost reported over north and central districts. The cold temperature pattern continued through the 26th, followed by a warming trend. Rainfall for the month was generally below normal with amounts ranging from about half an inch to near two inches. Again, several occurrences of strong winds over the peninsula adversely affected agricultural crops, especially vegetables.

Rainfall in May was heavy to excessive in southern Florida. Generous rains began falling at mid-month in central districts with above normal amounts by end of month. Extreme north had below normal rainfall.

Heavy to excessive rains occurred again in June in southern districts, with some locations reporting up to 24 inches for the month. Central districts had 10 to 15 inches of rain which is well above normal. Most northern areas had normal rainfall. Rainfall decreased some in July - ranging from slightly below normal at some stations to well above at others throughout the peninsula.

Consumer & Marketing Service*

COOPERATING WITH

*Florida Department Of Agriculture
Division Of Marketing*

P R E F A C E

The Federal-State Market News Service, a co-operative agency of the U. S. Department of Agriculture and the Florida Department of Agriculture, submits this annual summary for the 1968-69 season.

The daily citrus reports were issued at Lakeland, Florida from various reports released by the U. S. Department of Agriculture, Washington, D. C.; Florida Crop & Livestock Reporting Service; the Citrus Inspection Division, Florida Department of Agriculture, the Federal-State Frost Warning Service; the Florida Citrus Commission; Seald Sweet Growers Inc.; Florida Citrus Mutual; Florida Citrus Marketing Agreement Committee; Florida Cannners' Association; Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Late and corrected reports which are not yet available may cause revision of shipments, unloads and other similar data, for the 1968-69 season. Every effort has been made to include data in this summary which will be of most value to the Citrus Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

We are deeply grateful to the Citrus Industry and related agencies for their fine cooperation in making this summary possible.

Additional copies of this summary may be obtained upon request to Federal-State Market News Service, P. O. Box 69, Lakeland, Florida 33802.

Released:
October 1969

MARKETING FLORIDA CITRUS
SUMMARY OF 1968-69 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 4, 1968 to June 6, 1969, inclusive

GENERAL COMMENTS

Florida's citrus crop for the 1968-69 Season was the second largest on record. Harvesting got underway in September, but remained fairly light until the second week of October, by this time, the season was well underway.

There were several factors, mostly weather, that caused a wide variation in the quality and condition of Florida's 1968-69 citrus crop.

Florida experienced unusual weather throughout the 1968-69 Season. In October, Hurricane Gladys moved ashore along the west coast and moved across the central part of the state. She was accompanied by high winds and excessive rainfall, but there was little damage to citrus. In December, cold weather moved into the state. The most damaging temperatures of the season occurred on the mornings of the 16th and 17th. Substantial damage was experienced by citrus growers in the freeze area. Minimum temperatures, mostly in the 20s, were recorded in the northern and central districts with durations (hours at or below 28°F) ranging up to 12 hours. Significant fruit and leaf damage was observed in the northern and central districts. Wood damage was restricted to colder locations. On February 5th, additional freeze damage to citrus was noted in areas adversely affected by the December freeze.

Area Number One (Interior District) continued to supply the greater portion of Florida's citrus, although there has been some increase in volume of citrus from Area Number Two (Indian River District) over the past few years. With this increase, it has not materially affected the distribution of total volume between the two districts.

Florida's commercial citrus bearing acreage on all citrus through December 1968 was 763,914 acres. This is a substantial increase over 1967. Oranges 601,623 acres; Grapefruit 25,500 acres; Specialty Fruits 71,113 acres.

Continued Page 2

General Comments Cont'd

Preliminary production figures on citrus for the United States released by statistical Reporting Service of the U.S. Department of Agriculture for crop year 1968-69, amounted to approximately 268 million boxes; this is a substantial increase of some 72 million boxes compared with the 1967-68 Season. Orange production (excluding Temples) approximately 184 million boxes, an increase of about 59 million boxes; Temples 4,500,000 boxes; Grapefruit showed an increase, approximately 55 million boxes as compared with 44 million boxes in 1967-68. Lemons 16,600,000 boxes; Tangerines show a substantial increase compared with the previous season; 1968-69 approximately 5,320,000 boxes. Tangelos 1,800,000 boxes; Limes 700,000 boxes. Florida breakdown on citrus fruits as follows: Oranges 130,700,000 boxes; Temples 4,500,000 boxes; Grapefruit 40,200,000 boxes; Tangerines 4,300,000 boxes; Tangelos 1,800,000 boxes; Limes 700,000 boxes; for a grand total of 182,200,000 boxes, approximately 27 per cent higher than 1967-68 crop. All above figures subject to correction.

Florida's total volume of fresh citrus shipments carlot and carlot equivalents for 1968-69 Season 52,051 as compared to 60,891 last season. Breakdown for 1968-69 Season as follows: Oranges 24,622; Grapefruit 23,353; Tangerines 4,076.

All comparison for Oranges, Grapefruit and Tangerines include the estimated proportion of 'mixed cars' (exclusive of all Florida consolidated l.c.l. express cars for both years). For the 1968-69 Season the percentage of shipments that moved from the state by rail totaled 24.0 per cent, by truck 76.0 per cent.

Florida Oranges and Grapefruit sold at auction this season totaled 600 cars less than 1967-68. Total cars sold 1968-69: Oranges 885; Temples 250; Grapefruit 2,088; Price averages were irregular during the 1968-69 Season. Oranges (excluding temples) \$3.19 average; Temples \$3.62 average; Grapefruit \$2.80 average per 4/5 bushel container. Tangerines volume sold on auction market in 1968-69 was 62 cars under the total volume in 1967-68. Total number of cars sold 777; average price \$4.10 per 4/5 bushel container (includes: Tangerines, straight 441 cars, average price \$4.40; Tangelos 216 cars, average price \$3.14; Murcotts 114 cars, average price \$4.77; Satsumas 3 cars, average price \$2.80; Ponkans 1 car, average price \$3.60; Kings 2 cars, average price \$2.84.)

The number of boxes, all citrus, used by Florida Processors in 1968-69 as compiled by Florida Cannery Association was 146,763,470; this is an increase of 42,547,944 boxes compared to 104,215,526 for the 1967-68 Season. Processors used about 88 per cent of the Oranges and about 64 per cent of the Grapefruit that was harvested during the 1968-69 Season. Delivered Cannery Prices 1968-69 Season were lower than last season on all citrus with an average through August 31st as follows: Oranges, Concentrate \$2.70, Juice \$2.11; Grapefruit Juice \$.98.

Shipments of fresh citrus unloads from Florida in 1968-69 totaled 36,204 cars for the 41 U.S. Cities and 5 Canadian Cities via rail & truck. Orange unloads from Florida totaled 14,297; New York City-Newark leading the way with rail 1,936, truck 1,658, total 3,594. Philadelphia was second with a total number of 613 rail and 910 truck. Unloads of Florida Grapefruit in 41 Cities (rail and truck) totaled 17,814; New York City-Newark receiving the greater part both rail and truck totaling 4,263 with Philadelphia second with a grand total of 1,620 cars and Toronto, Ont., Canada third with 1,576 cars. Both Tangerines and Mixed Citrus from Florida were well represented. Grand total Florida Tangerines 2,699; Mixed Citrus 1,394.

The conversion factor of 500 1 3/5 Bushel Boxes or 1,000 4/5 Bushel Containers was used in converting truck and boat shipments to carlots.

For detailed auction data for California citrus for 1968-69 Season, write Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California 90021.

WEATHER

CHARACTER OF THE 1968-69 SEASON

Below normal temperatures and above normal rainfall characterized the 1968-69 season. The 66 cold nights (Minimum temperature 36°F or lower) in the peninsular equaled the record set during the 1939-40 season. Substantial damage was experienced by citrus and vegetable growers in the freeze of December 16 and 17 1968. A freeze in the Upper East Coast and central districts on the morning of February 5, caused considerable damage to citrus trees in the colder low ground locations which had put on new growth after the December freeze. Prolonged cold weather throughout the season substantially retarded crop and pasture growth. Several occurrences of strong winds during February and March were detrimental to vegetable crops in peninsular Florida. Hurricane Gladys moved ashore between Bayport and Crystal River shortly after midnight on October 19th and excited the state south of St. Augustine on the forenoon of the 19th. High winds and excessive rainfall were experienced in agricultural areas of the peninsula. Storm rainfall totals averaged two to five inches over the peninsula.

November was cold with temperatures averaging three to four degrees below seasonal normal throughout the peninsula. November began with mild weather over the peninsula but colder weather arrived during the second week and continued for the remainder of the month. Eight cold nights (temperatures 36°F or lower) were recorded and the first peninsula-wide frost occurred on the morning of the 20th. Frost was scattered and moderate in the north, central, and Everglades Districts, with patchy light frost reported in the Lower East Coast District. Rainfall totaled up to one inch above normal in all districts with the exception of the Lower East Coast District where amounts were generally one inch below normal.

December continued cold with all districts averaging three to four degrees below seasonal normal. The most damaging temperatures of the season occurred on the mornings of the 16th and 17th. Minimum temperatures mostly in the twenties were recorded on both mornings in the northern and central districts with durations (hours at or below 28°F) ranging up to 12 hours. The coldest of the two nights in the southern districts was the 16th when minima in the Everglades were in the low to mid-twenties. The upper twenties and low thirties prevailed in the Lower East Coast. Minimum temperatures were 5 to 10 degrees higher on the morning of the 17th in the southern districts. Significant fruit and leaf damage was observed in citrus areas of north and central district, but wood damage was restricted to the coldest locations and was minor. Substantial damage was sustained by the vegetable industry. Rainfall was light with amounts generally one-half to an inch and a half below normal.

January was cool. Temperatures averaged near one degree below seasonal normal in the south and central districts and near three degrees below seasonal normal in the northern districts. Scattered light to moderate frost occurred on several mornings in the north and central districts while reports indicated only isolated patches of frost in the Everglades District. Significantly adverse temperatures were absent during the month but crop and pasture growth was retarded. Rainfall was one-half to an inch above normal in the south and central districts but was near one inch below normal in the northern districts.

February was cold with temperatures averaging three to five degrees below the seasonal normal throughout the peninsula. The most adverse of the cold mornings was the 5th when minima in the mid-twenties to lower thirties were recorded in colder locations of north and central districts. Durations (hours at or below 28°F) ranged two to eight hours in the northern districts and up to six hours in the central districts. Additional freeze damage to citrus was noted in areas adversely affected by the December freeze. Temperatures in the southern districts on the 5th ranged in the upper thirties to mid-forties. Rainfall was one to two inches above normal over the northern districts and near normal remainder of the peninsula.

March continued cold with temperatures averaging three to five degrees below the seasonal normal over the peninsula. Several occurrences of scattered frost were reported in the northern and central districts. Isolated patches of frost were reported occurring in the Everglades District on a couple of mornings. Prolonged cold continued to retard crop growth and citrus bloom. Rainfall totaled one to three inches above normal throughout the peninsula with locally heavy rains occurring over the southern districts on March 8.

Rainfall during April was light except in Lower East Coast where moderately heavy rains fell. May rainfall was mostly above normal but with some dry spots in Central. Generous precipitation occurred in June, July and August in most areas.
